CHAPTER 0: SURVEY-BASED HARMONIZED INDICATOR PROGRAM (SHIP)

As Sub-Saharan African economies become more open and globalized, huge opportunities are created for individuals and families. Yet, a large fraction of the population has not benefited sufficiently, and economic and social inequality is real and, in some cases, growing. Household surveys are a data source providing rich information on the impact of economic changes on individual households. This source of information, however, is largely underutilized due to the complexity of household surveys and significant time required to prepare the survey data for analytical work.

The SHIP seeks to eliminate the bottleneck of analyzing household survey data by extracting from existing household surveys about 200 SHIP variables that have the same definition and variable names. These variables include household consumption, access to infrastructure (water, electricity, education and health care), status of employment, education, and health.

This manual presents detailed guidelines for compiling household survey data into a set of most commonly available variables from various types of household surveys. To ensure the quality and transparency of the data, it is critical to document the procedures of compiling consumption aggregation and other indicators so that the results can be replicated from the original household survey data with ease. This enables data consistency and continuity that make temporal and cross-country comparisons consistent and more reliable.

Four harmonized data files are prepared for each survey to generate a set of harmonized variables that have the same variable names and definitions. Procedures used to compile these variables will be extensively documented. Invariably, in each survey, questions will be asked in different manner, which poses challenges to consistently define harmonized variables. The harmonized household survey data presents the best available variables with harmonized definitions. The four harmonized data files are:

- a) **Module I: Individual file** (except Labor force variables): Information on basic characteristics of individuals such as age, sex, literacy, education, health, and child anthropometry.
- b) **Module II: Labor force file**: Information on labor force including employment/unemployment, earnings, sectors of employment, etc.
- c) **Module III: Household file**: Information on household expenditure, characteristics of household head (age, sex, level of education, employment), housing amenities, assets, and access to infrastructure and services.
- d) **Module IV: Household Expenditure file**: Information on consumption/expenditure aggregates organized by consumption groups according to the UN Purpose of Household Consumption (COICOP).

Before harmonizing a household survey using this manual, the user should first create 6 sub-directories as instructed below. Additionally, all SHIP files must be named according to this manual. It is critical that all data editing checks (cleaning and assumptions) should be documented in detail in the computer programs as comments. This rigorous procedure is to ensure that the SHIP files are replicable from the original survey data, which proves to be invaluable when SHIP files are used for analytic work.

CHAPTER 0.1 SHIP DIRECTORY ORGANIZATION AND NAMING CONVENTION

Six sub-directories should be created under the main directory named after the survey, as shown below.

Main directory:	Storage Purposes
"\COUNTRYCODE_SURVEYNAME_YEAR\"	Parent directory of all sub-directories
Sub-Directories	
\01_RAWDATA	All survey data sets as keyed in (no editing has been done on this data). All questionnaires, survey manuals and any related documents should also be kept in this directory. This directory guards the original survey directory from the National Statistical Offices, and will never be touched during the SHIP process.
\02_CLEANDATA	All clean survey data sets before aggregation. SHIP extracts all its SHIP files from this directory.
\03_PROGRAMS	All program files that derive the SHIP indicators (See SHIP file naming convention below).
\04_AGGDATA	All SHIP output data files produced by the above programming files(see file naming convention below)
\04_AGGDATA_PUBLIC	All SHIP files with anonymized household ID
\05_DOC	All reports related to the survey found from other sources, such as poverty assessment, etc.

CHAPTER 0.2 SHIP FILE NAMING CONVENTION

For each survey, the SHIP creates 21 program files, 18 data files (and another set of 18 data files with scrambled household ID, but all other variables are the exactly the same). They should be all named according to the table below (CCD stands for ISO 3 letter country code, see Appendix III). The objective of the file naming convention is to enable the complete documentation and transparency of extracting SHIP variables from the original household survey data. All SHIP files should be replicable from the original data based on SHIP program files. The extension of the files for different computer languages will be different (In this manual, all file extensions are named using STATA language). The file names for the computer programs and their output data files should be the same, ensuring an easy tracking between the SHIP data files and their original household survey files.

SHIP Program files	SHIP output (data) files	Corresponding tables in the manual
00_CCD_BASICINFO.do	00_CCD_BASICINFO.dta	Table 1.0
01_CCD_EXPFOOD.do	01_CCD_EXPFOOD.dta	Table 4.1
02_CCD_EXPALCH.do	02_CCD_EXPALCH.dta	Table 4.2
03_CCD_EXPCLTH.do	03_CCD_EXPCLTH.dta	Table 4.3
04_CCD_EXPHOUS.do	04_CCD_EXPHOUS.dta	Table 4.4
05_CCD_EXPFURN.do	05_CCD_EXPFURN.dta	Table 4.5
06_CCD_EXPHLTH.do	06_CCD_EXPHLTH.dta	Table 4.6
07_CCD_EXPTRSP.do	07_CCD_EXPTRSP.dta	Table 4.7
08_CCD_EXPCMNQ.do	08_CCD_EXPCMNQ.dta	Table 4.8
09_CCD_EXPRCRE.do	09_CCD_EXPRCRE.dta	Table 4.9
10_CCD_EXPEDU.do	10_CCD_EXPEDU.dta	Table 4.10
11_CCD_EXPHOTL.do	11_CCD_EXPHOTL.dta	Table 4.11
12_CCD_EXPMISC.do	12_CCD_EXPMISC.dta	Table 4.12
13_CCD_FDPINDEX.do	13_CCD_FDPINDEX.dta	Tables 4.13.1 and 4.13.2. (Optional)
CCD_YEAR_E.do	CCD_YEAR_E.dta	Variables from all above SHIP files
CCD_YEAR_CLEANING.do		Cleaning programing for the CCD_YEAR_E.dta
CCD_YEAR_I.do	CCD_YEAR_I.dta	Tables 1.0, 1.1, 1.2, 1.3, and 1.4
CCD_YEAR_L.do	CCD_YEAR_L.dta	Tables 1.0, 2.1, 2.2, 2.3, and 2.4
CCD_YEAR_H.do	CCD_YEAR_H.dta	Tables 1.0, 3.1, 3.3, 3.4, 3.5, and 3.6
CCD_YEAR_INDICATORS.do	INDICATORS.dta	Extract 60 indicators from all SHIP files by consumption quintile and rural urban areas
Z_CCD_YEAR_ID.do	Z_CCD_YEAR_ID.dta and all of the above files with a suffix “_PUBLIC”	

CHAPTER 0.3 SHIP VARIABLE NAMING CONVENTION

All 200 plus SHIP variables are listed in the four modules below, along with their definitions and the way to compile them. Variables in the data files must follow the sequence in which they appear in the tables. Not all SHIP variables are available in all surveys. When there are no questions in the survey corresponding to a particular SHIP variable, the variable should still be created with missing values. However, if there is no labor force module in a survey, then the entire labor force file (CCD_YEAR_L.dta) should be missing.

CHAPTER 1: MODULE I – HARMONIZED INDIVIDUAL-LEVEL VARIABLES

This module extracts variables of individuals in the household and covers approximately forty quantitative variables. The information is organized in 5 tables that provide variables on basic household identification, demographic characteristics, education, health, and child's vaccination and anthropometry.

TABLE 1.0 SAMPLE, GEOGRAPHY AND BASIC HOUSEHOLD IDENTIFIER (00_BASICINFO.DTA)

These variables will be included in all SHIP files except for the variable DISTRICT

No	SHIP VARIABLE NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
1	COUNTRY	Country code	String variable, of 3 character length (Appendix II)
2	REGION	Region code and label the names	Codes vary by country
2b	PROVINCE	Province code and label the names	Codes vary by country.
2c	DISTRICT	District code and label the names (if available)	Codes vary by country.
3	HID	Household unique identification	String variable , length varies by country.
4a	SURVEMO	Month of survey	The month when the questionnaire was administered.
4b	SURVEYR	Year of survey	The year when the questionnaire was administered.
5	RURURB	Area of residence <i>1 = Rural</i> <i>2 = Urban</i>	
6	HHSIZE	Household members	Total # of residents (regular members) in the household, including maids and servants
7	WTA_S	Individual weighting coefficient	Weights from sampling, used in weighting statistics calculated from individual level variables.
8	WTA_S_HHSIZE	Household weighting coefficient	WTA_S multiplied by HHSIZE, normally used in weighting statistics calculated from household level variables.

TABLE 1.1 BASIC DEMOGRAPHIC CHARACTERISTICS (CCD_YEAR_I.DTA)

No	SHIP VARIABLE NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
11	INDID	Individual identification	A <u>string variable</u> uniquely identifies the household members in each household. Sequentially numbered from 1 for the household head to <i>N</i> (household size).
12	SEX	Sex <i>1 = Male</i> <i>0 = Female</i>	Sex of the individual
13	RELAT	Relationship to household Head <i>1 = Head</i> <i>2 = Spouse</i> <i>3 = Child</i> <i>4 = Father/Mother</i> <i>5 = Grandchild</i> <i>6 = Son-in-law/daughter-in-law</i> <i>7 = Other relative</i> <i>8 = Domestic help/paying boarder</i> <i>9 = None relative</i>	Relationship of each household member to the household head. Each household must have only one head.
14	HEAD	Household Head <i>0 = No</i> <i>1 = Yes</i>	Assigned based on the reported household head status. Check to ascertain that a household has only one unique household head
15	MARSTAT	Marital status <i>1 = Never married</i> <i>2 = Married monogamous</i> <i>3 = Married polygamous</i> <i>4 = Common law / union coutumiere / union libre / living together</i> <i>5 = Divorced / Separated</i> <i>6 = Widowed</i>	Marital status of individual. If polygamous status is not reported, check to find polygamous status in a household by counting the number of spouses in the household.
16	SP_PRES	Spouse present <i>1 = Yes</i> <i>0 = No</i>	Code on the basis of a question that asks whether or not the spouse lives in the household. Some surveys, instead ask for length of absence. If absence is more than 6 months code as 0 (No).
17	AGEY	Age in completed years	Ages ≥ 99 must be coded as 98. <i>Missing values</i> should be left as missing. For children ≤ 60 months, check consistency with age in months to ascertain correct age in completed years.

18	ETHNICITY	Ethnicity code and name	Codes vary by country.
19	LANGUAGE	Language usually speak, code and label the names	Codes vary by country.
110	RELIGION	Religion, code and label the names	Codes vary by country.

TABLE 1.2 LITERACY AND EDUCATION (CCD_YEAR_I.DTA)

No	SHIP VARIABLE NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
111	LITERACY	Literacy status <i>1 = Can read and write</i> <i>2 = Cannot read or write</i> <i>3 = Cannot be determined</i>	For individuals aged 5 and above only. Value must be missing for all others. Be careful while coding 1 (read and write)
112	EVERATTD	Ever attended school <i>1 = Yes</i> <i>0 = No</i>	For individuals aged 5 and above only. Value must be missing for others.
113	ATSCHOOL	Currently enrolled in school <i>1 = Yes</i> <i>0 = No</i>	Use the question that asks for current attendance. If such a question is missing, use the question that explicitly asks for enrollment over the past 12 months. In such surveys, record this in the comments. Code as 0 if EVERATTD is 0.
114	EDLEVEL_AR	Highest level of education completed <i>0 = No education</i> <i>1 = Pre-school/ Primary not completed</i> <i>2 = Completed primary, but less than completed lower secondary</i> <i>3 = Completed lower secondary (or post-primary vocational education) but less than completed upper secondary</i> <i>4 = Completed upper secondary (or extended vocational/technical education)</i> <i>5 = Post secondary technical</i> <i>6 = University and higher</i> <i>7 = Formal adult education or literacy program</i> <i>9 = Other</i>	Code for all individuals who were administered in the Education section. If a person is currently enrolled in the highest year of education, then his/her level of education completed should be determined by minus one year. For example, if a person is currently enrolled in P6, then his/her highest level completed should be coded as 1 (Pre-school/ Primary, not completed). Individuals enrolled in higher/ University level are coded as 6 (University and higher) regardless of whether it is completed or not. If there are more than 1 percent of missing values please report to the supervisor for further instructions.

115	EDYEARS	<p><i>Years of completed education</i></p> <p>0 = pre-school 1 = grade 1 2 = grade 2 . . . 99 = unspecified/incomparable</p>	<p>Code for all individuals who were administered in the Education section.</p> <p>For individuals who are currently enrolled in school, their years of education completed correspond to the class <i>currently attending minus one</i>.</p> <p>For individuals who are not currently enrolled in school, the years of completed education corresponds to the highest level of education completed.</p> <p>This is a continuous variable of the number of years of formal schooling completed. It is constructed only if the survey asked for the number of year of education or highest grade level completed; otherwise, the values are constructed as missing.</p> <p>The years of education that each grade corresponds to, varies by country, for example - some countries may have 5 or 6 years of primary school, 3 years of lower-secondary school, while other countries may have 4 years of primary school and 4 years of lower-secondary school. Refer to the UNESCO ISCED mappings.¹</p> <p>For higher education, the grades/years may not have been asked explicitly. In such cases, the variable should be constructed based on the following assumptions:-</p> <ol style="list-style-type: none"> 1) If the individual has completed the tertiary education specified, add to years of completed education - 4 years for BA/BSc, 6 years for MA/MSc, and 8 Years for PhD after the completion of secondary education. 2) If the individual has not completed tertiary education or completion cannot be ascertained, add to years of completed education – 2 years for BA/BSc, 5 years for MA/MSc, and 7 years for PhD. <p>The variable does not take into account the actual number of years required to reach this grade level. In other words, first grade repeated three times only counts as 1 year of completed education.</p>
-----	----------------	---	---

¹ <http://www.uis.unesco.org/Education/ISCEDMappings/Pages/default.aspx>

116	EDYEARS_AT	Years of education for currently enrolled 0 = pre-school 1 = grade 1 2 = grade 2 . . . 99 = unspecified/incomparable	Code this variable only for individuals currently enrolled in school. Otherwise code as missing. Code the years of education corresponding to the currently attending grade.
117	SCHLTYP	Type of school attending 1 = <i>Public</i> 2 = <i>Private</i> 9 = <i>Other</i>	Code only for individuals currently attending school (ATSCHOOL=1). Value must be missing for others.

TABLE 1.3 HEALTH (CCD_YEAR_I.DTA)

No	SHIP VARIABLE NAME	LABEL and CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
118	MORB_TR	Time reference for variable MORBID (in weeks)	Number of weeks. By convention, 1 month = 4 weeks
119	MORBID	Morbidity last MORB_TR 1 = <i>Yes</i> 0 = <i>No</i>	Has the person been sick or injured in the past X (MORB_TR) weeks?
120	RTREATM	Sought medical attention 1 = <i>Yes</i> 0 = <i>No</i>	Code only for sick individuals (MORBID=1).
121	HLTHFAC	Health provider visited 1 = <i>Hospital</i> 2 = <i>Clinics</i> 3 = <i>Dispensary, health center, health post</i> 4 = <i>Outreach</i> 5 = <i>Pharmacy</i> 6 = <i>Traditional healer</i> 9 = <i>Other</i>	Code for all individuals who reported it in the survey irrespective of whether they sought medical attention.
122	OWHPROVD	Ownership of health provider visited 1 = <i>Public</i> 2 = <i>Private - modern medicine</i> 3 = <i>Private - traditional healers</i> 4 = <i>Missionary / NGO</i> 9 = <i>Other</i>	Code only for all individuals who visited a health care facility (1<=HLTHFAC<=9).

TABLE 1.4 CHILD SURVIVAL AND ANTHROPOMETRY FOR CHILDREN AGED 0-60 MONTHS (CCD_YEAR_I.DTA)

No	SHIP VARIABLE NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
123	AGEM	Age of child in completed	Only for children aged 0 - 60 months (in some surveys the cu-off months is 59 months); otherwise code as missing
124	WHDELIV	Who helped assist Childbirth <i>1 = Trained Birth Attendant</i> <i>2 = Traditional Birth Attendant</i> <i>3 = Relative/friend</i> <i>9 = Other</i>	Only for children aged 0-60 months.
125	VCARD	Child has vaccine card <i>1 = Yes</i> <i>2 = No, but child has been vaccinated</i> <i>3 = No, child never vaccinated</i>	
126	BCG	Child immunized against BCG <i>1 = Yes</i> <i>0 = No</i> <i>9 = Don't know</i>	Only for children aged 0-60 months. BCG is the vaccine against tuberculosis.
127	POLIO_DO	Number of doses of Polio received <i>0 = No dose</i> <i>1 = One dose</i> <i>2 = Two doses</i> <i>3 = Three doses</i> <i>4 = More than three doses</i> <i>9 = Unspecified number of doses</i>	Only for children aged 0-60 months. Vaccine is also referred to as OPV. If Polio vaccine has been given but the number of doses is unknown or is not specified, code as 9.
128	DPT_DOSE	Number of doses of DPT received <i>0 = No dose</i> <i>1 = One dose</i> <i>2 = Two doses</i> <i>3 = Three doses</i> <i>4 = More than three doses</i> <i>9 = Unspecified number of doses</i>	Only for children aged 0-60 months. 3 doses refer to full immunization against Diphtheria, Pertussis and Tetanus.

I29	MEASLES	Child immunized against measles <i>1 = Yes</i> <i>0 = No</i> <i>9 = Don't know</i>	Only for children aged 0-60 months.
I30	VACCINE	Immunization status of Child <i>1 = Fully immunized</i> <i>2 = Partially immunized</i> <i>3 = Immunized but no information on completeness</i> <i>4 = Not immunized</i>	Only for children aged 0-60 months. <i>Fully immunized refers to:-</i> (a) BCG (1 or more doses). (b) Three or more doses of Polio (1-2-3). 3 or more doses may include Polio at birth (Polio-0). (c) Three or more doses of DPT (1-2-3) and (d) Measles (1 or more doses).
I31	WEIGHT	Weight of Child (kg)	Only for children aged 0-60 months.
I32	HEIGHT	Height of Child (cms)	Only for children aged 0-60 months. By convention 1 cm = 10 mms 1 inch = 2.54 cms.

Note:

- a) For any variable not collected in a country, variable should be created and left as (.) in the final harmonized file.
- b) Variables in the data files must follow the sequence in which they appear in the manual.

CHAPTER 2: MODULE II – HARMONIZED LABOR FORCE VARIABLES

Note: The construction of employment and labor participation variables is specific to Sub-Saharan African context since over 80 percent of employment activities are in the informal sector. Studying labor participation in Tanzania, Bardasi, Beegle, Dillon and Serneel found that due to poor questionnaire design many unpaid family workers under reported their economic activities, especially women who reported domestic duties as the main activity. These individuals inevitably undertake some unpaid economic activities such as cultivating, raising livestock, fetching water, and collecting wood (preparing meals for the family and caring for own children are not classified as economic activities by ILO definition. The SHIP developed complementary steps to capture these under-reported economic activities.

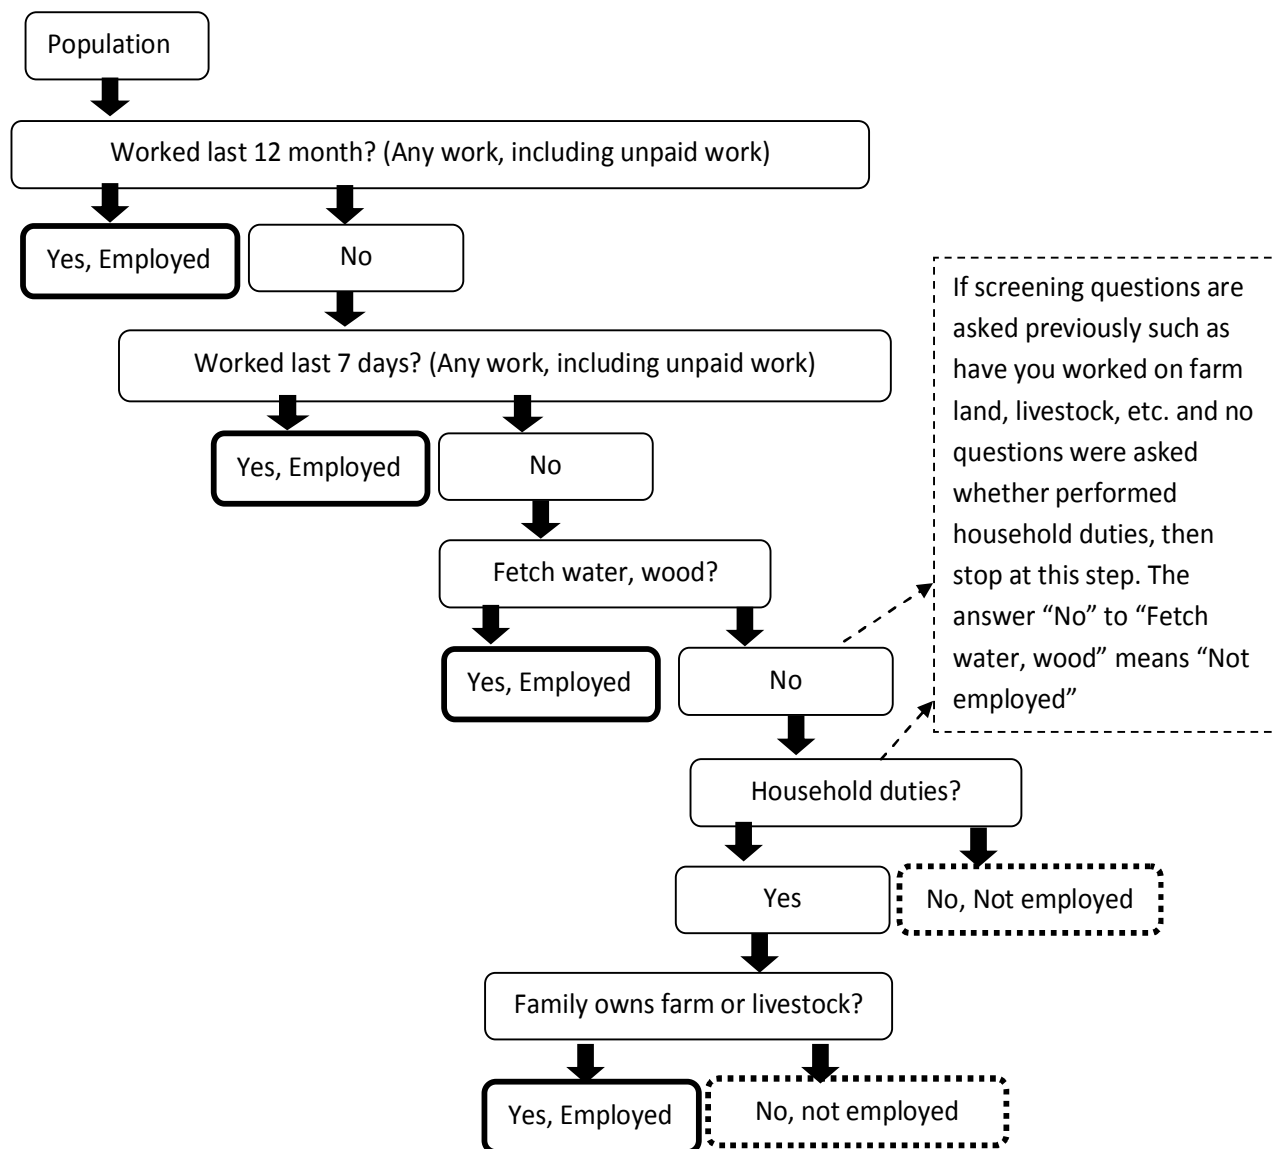

This manual reclassifies the employment status of these individuals, who claim household duties as their main activity, as employed rather than inactive. Because labor force questionnaires are significantly different from one another, it is not possible to provide a set of very specific steps that one can follow to classify employment status in Africa. The diagram below illustrates the logic used to classify unpaid economic activities. For details refer to Bardasi, Beegle, Dillon and Serneels "Do Labor Statistics Depend on How and to Whom the Questions Are Asked", World Bank Policy Research Working Paper 5192.

Additionally, because informal economic activities are so common, there are often missing values for the sectors of employment. To remedy this situation we designed a variable called "EMPFRM_1" and "EMPFRM_2" classifying primary and secondary employment respectively into two categories "Farm" and "Nonfarm" activities. Everyone who had a job in last year or last 7 days, must be classified into either Farm

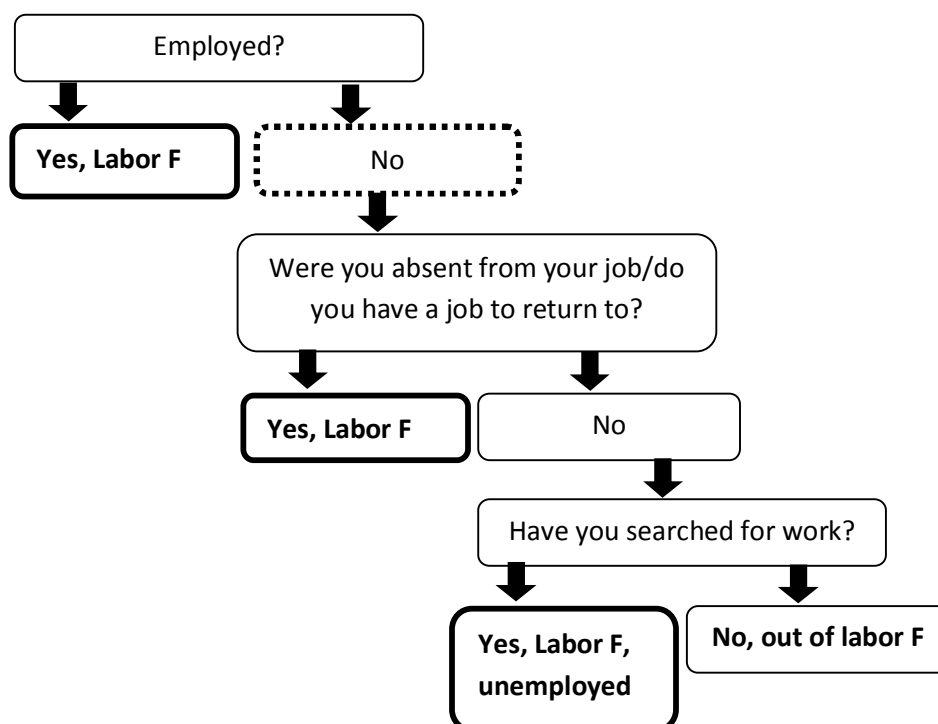

or Nonfarm activities using any information available in the survey that might help in this classification (less than one percent missing values is allowed).

It is also strongly recommended that the user studies Appendix I carefully before starting to construct labor force variables, for detailed and in-depth explanations of the logic and how to construct various key SHIP labor force variables.

Definition of Employment in Africa Region

Definition of Unemployment and Labor Force in Africa Region

(Variables below with sequence number starting with “L” are labor force variables; other variables are imported from other Individual/ household level SHIP files. Generate for all individuals)

All variables in this section to be included in CCD_YEAR_L.dta

TABLE 2.1 IDENTIFICATION, INDIVIDUAL, EDUCATIONAL AND TRAINING VARIABLES (CCD_YEAR_L.DTA)

No	NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
1	COUNTRY	Country code	To be merged from 00_BASICINFO.dta
2	REGION	Region code	To be merged from 00_BASICINFO.dta
2b	PROVINCE	Province code	To be merged from 00_BASICINFO.dta
2c	DISTRICT	District code	To be merged from 00_BASICINFO.dta
3	HID	Household unique identification	To be merged from 00_BASICINFO.dta
4a	SURVEMO	Month of survey	To be merged from 00_BASICINFO.dta
4b	SURVEYR	Year of survey	To be merged from 00_BASICINFO.dta
5	RURURB	Area of residence <i>1 = Rural</i> <i>2 = Urban</i>	To be merged from 00_BASICINFO.dta
7	WTA_S	Individual weighting coefficient	Weights from sampling. To be merged from 00_BASICINFO.dta.
l1	INDID	Individual identification	To be merged from CCD_YEAR_I.dta.

I2	SEX	Sex <i>1 = Male</i> <i>0 = Female</i>	To be merged from CCD_YEAR_I.dta.
I3	RELAT	Relationship to household Head <i>1 = Head</i> <i>2 = Spouse</i> <i>3 = Child</i> <i>4 = Father/Mother</i> <i>5 = Grandchild</i> <i>6 = Son/daughter-in-law</i> <i>7 = Other relative</i> <i>8 = Domestic help/paying boarder</i> <i>9 = None relative</i>	To be merged from CCD_YEAR_I.dta.
I4	HEAD	Household Head <i>0 = No</i> <i>1 = Yes</i>	To be merged from CCD_YEAR_I.dta.
I5	MARSTAT	Marital status <i>1 = Never married</i> <i>2 = Married monogamous</i> <i>3 = Married polygamous</i> <i>4 = Common law / union coutumière / union libre / living together</i> <i>5 = Divorced/ Separated</i> <i>6 = Widowed</i>	To be merged from CCD_YEAR_I.dta.
I7	AGEY	Age in completed years	To be merged from CCD_YEAR_I.dta.
I11	LITERACY	Literacy status <i>1 = Can read and write</i> <i>2 = Cannot read or write</i> <i>3 = Cannot be determined</i>	To be merged from CCD_YEAR_I.dta.
I12	EVERATTD	Ever attended school <i>0 = No</i> <i>1 = Yes</i>	To be merged from CCD_YEAR_I.dta.
I14	EDLEVEL_AR	Education level <i>0 = No education</i> <i>1 = Pre-school Primary, incomplete</i> <i>2 = Primary completed</i>	To be merged from CCD_YEAR_I.dta.

		<i>but less than lower secondary completed</i> <i>3 = Lower secondary completed (or post-primary vocational education) but less than upper secondary completed</i> <i>4 = Completed upper secondary</i> <i>5 = University and higher</i> <i>6 = Any post-secondary technical education</i> <i>7 = Adult education or literacy program</i> <i>9 = Other</i>	
I15	EDYEARS	Years of education <i>0 = pre-school</i> <i>1 = grade 1</i> <i>2 = grade 2.</i> <i>.</i> <i>99 = unspecified / incomparable</i>	To be merged from CCD_YEAR_L.dta.
E65	FDPINDEX	Regional food price deflators	To be merged from CCD_YEAR_E.dta
E70	CPI2005_DEF	CPI Deflator	To be merged from CCD_YEAR_E.dta
E71	PPP2005	2005 PPP exchange rate	To be merged from CCD_YEAR_E.dta

TABLE 2.2 LABOR-FORCE: VOCATIONAL TRAINING (CCD_YEAR_L.DTA)

No	NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
L1	EMPLEDU	Post school vocational training <i>0 = No</i> <i>1 = Yes</i>	Code as 1 (YES) if the individual has ever attended or is currently attending post school vocational training, otherwise 0 (NO).
L2	SVYAGE	Lower age cut off for employment svy	The lower age cut-off for individuals who were administered the LF questionnaire.
L3	EMPLEDU_TU	Time Unit of course duration <i>1=Days</i> <i>2=Weeks</i> <i>3=Months</i> <i>4=Years</i>	Categorical variables to capture the unit of time for the duration of the course.
L4	EMPLEDU_TIME	Number of EMPLEDU_TU	Continuous variable to capture the duration of the course.

L5	EMPLEDU_CER	Highest certificate obtained	The name of the certificate earned. Codes will vary with the country
L6	EMPLEDU_SCHLTYP	Type of Training Institute 1=Public 2=Private 9=Other	Code only if EMPLDU=1. Leave as missing if EMPLDU is not equal to 1.
L7	APPREN	Apprenticeship 0 = No 1 = Yes	Code as 1 (YES), if the individual HAD participated in an apprenticeship. <i>Note: If currently working as an apprentice, DO NOT code as 1 here (code as 0). It will be included in variable EMPTYPE_WB_1 and/or EMPTYPE_WB_2</i>

TABLE 2.3 SCREENING QUESTIONS AND PRIMARY EMPLOYMENT (CCD_YEAR_L.DTA)

No	NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
L8	WORKED_Y	Labor force screening <u>last year</u> 0 = No 1 = Yes 99=The question is not in the survey	Use 12 month employment section only. Code as 1 (YES), if the individual performed any economic activity for cash or in-kind payment or barter or self-consumption for any length of time during the past 12 month, otherwise code as 0 (NO).
L9	WORKED_7	Labor force screening <u>last 7 days</u> 0 = No 1 = Yes 99= The question is not in the survey	Use 7 day employment section only. Code as 1 (YES), if the individual performed an economic activity for cash or in-kind payment or barter or self-consumption for any length of time during last 7 days, otherwise code as 0 (NO). Code as 0 (No), if a person has a job but was absent for last 7 days or more. Do not re-code missing values.
L10	ABSENT	Absent for 7 days or more 0 = No 1 = Yes 99 = The question is not in the survey	Use 7 day employment section only. If WORKED_7 = 1 then code as missing value (skip the variable) If WORKED_7 = 0, then code accordingly Code as 1 (YES), if the person has a job but was absent from it for any reason (sick, other leave, temp. layoff, is about to start work etc.), otherwise code as 0 (NO). Thus all individuals who did not work in the past 7 days AND do not have a job to go back to are coded as 0(NO).

L11	LOOKJOB_TU	Up to xx weeks	<p>If both a 7 day and 12 month employment section is present in a survey, use only the 7 day employment section to code this variable</p> <p>Record the reference time period (in weeks) for which the question is asked.</p> <p>If the question gives a range of reference period, take the longest time period, up to 4 weeks.</p> <p>4 weeks is the time period defined by the ILO</p> <p><i>Note: (7 days = 1 week)</i></p>
L12	LOOKJOB	<p>Looked for job in last “LOOKJOB_TU” weeks</p> <p>0 = No 1 = Yes 99 = The question is not in the survey</p>	<p>If both a 7 day and 12 month employment section is present in a survey, use only the 7 day employment section to code this variable.</p> <p>Code as 1 (YES) if BOTH the following conditions are satisfied, otherwise code as 0 (NO).</p> <ol style="list-style-type: none"> 1. The individual did not perform an economic activity for cash or in-kind payment in the last 7 days. 2. The individual looked for a job in the LOOKJOB_TU weeks.
L13	FETCHWOOD	<p>Fetches wood for the household</p> <p>0= No 1= Yes 99 = The question is not in the survey</p>	<p>Code as 1 (YES) if the individual fetched wood for his/her own household <i>or for others</i>, otherwise code 0 (NO).</p> <p>Based on UN definition of SSN, Fetching wood (<i>for pay or in-kind</i>) is an economic activity.</p>
L14	FETCHWATER	<p>Fetches water for the household</p> <p>0= No 1= Yes 99 = The question is not in the survey</p>	<p>Code as 1 (YES) if the individual fetched water for his/her own household <i>or for others</i>, otherwise code 0 (NO).</p> <p>Based on UN definition of SSN, Fetching water (<i>for pay or in-kind</i>) is an economic activity.</p>
L15	NOTLAB_WB	<p>Reason not in labor force</p> <p>0 = In labor force 1 = Household duties 2 = Retired 3 = Student 4 = Dependent (too old)</p>	<p>If LABFORCE_WB=1 then code as 0, otherwise if LABFORCE_WB=0 then code according to responses.</p> <p>Code as 4 (Dependent), if the response is ‘dependent’ or ‘too old’ or ‘too young’ or if the individual is below 5 years of age.</p>

		<i>or too young to work)</i> <i>5 = Disabled/ill</i> <i>6 = Discouraged worker</i> <i>9 = Other</i>	<p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. For all missing values and observations coded as 9, use the 7 day section to recode the variable.</p>
L16	EMPLHOME	<p>Employment in household duties in own house</p> <p>0 = No 1 = Yes 99= The question is not in the survey</p>	<p>This variable is created to capture those individuals who were incorrectly classified as out of the labor force because in the questionnaire design, they had an option of reporting ‘domestic duties’ as their activity.</p> <p>Construct this variable in 2 stages:</p> <p>Stage1: Identifying individuals engaged in household duties</p> <p>An individual is classified as engaged in household duties if ALL the following conditions are met:</p> <ol style="list-style-type: none"> 1. Did not work in the past 1 year (WORKED_Y != 1) 2. Did not work in the past 7 days (WORKED_7 != 1) 3. Was not absent from work (ABSENT != 1) 4. Performed household duties (NOTLAB_WB=1). <p><i>Note: Performed household duties should be checked from the responses used to code NOTLAB_WB. If no question can be found to code NOTLAB_WB, use information from the section on household chores.</i></p> <p>Stage 2: Checking for relevant conditions to classify individuals identified above as EMPLHOME</p> <p>If such an individual belongs to a household that carries out agricultural activities (farming/ sharecropping/ hunting/ fishing/ logging/forestry/raising livestock/bee-keeping), then, such an individual should be considered as employed and coded as 1(Yes), otherwise code as 0(No).</p>
L17	EMPTYTYPE_WB_1	<p>Type of employment, primary job</p>	<p>See Appendix I for further details.</p> <p>To generate this variable look for all available information in the following</p>

		<p>1 = Wage & salaried worker 2 = Self-employed with employees 3 =Self-employed w/o employees 4= Employer 5 = Domestic employees (work for compensation for private house) 6 = Family worker 7= Apprentice 9 = volunteer 99=Other/ Not known/ Missing.</p>	<p>sequence:</p> <ol style="list-style-type: none"> 1. First use the longest recall period (e.g. 12 month recall period) to code this variable. 2. Replace the value of missing (coded 99) and volunteer/other (coded 9) based on information provided in sections with lesser recall periods (e.g. 7 day recall period) 3. Replace the value of the missing (coded 99) and volunteer/other (coded 9) based on information provided in other sections on 'agriculture' and 'enterprise' by looking for explicit individual level information in these sections (i.e. the person responsible or working at the farm/enterprise). Match individual IDs from enterprise/farm sections with those recorded in the individual level file. 4. Replace the value of the missing (coded 99) and volunteer/other (coded 9) based on information provided at the household or farm or enterprise level. If the household is involved in any agricultural activity, then code the household head as 3 (self-employed without employees). If the household owns a household enterprise, then code the household head as 2 (self-employed with employees or 3 (self-employed without employees) based on number of employees. If no information on the number of employees is available then code as 3 (self-employed without employees). 5. Replace the value of the missing (coded 99) and volunteer/other (coded 9) based on EMPLHOME/ FETCHWOOD/ FETCHWATER. If EMPLHOME=1 OR FETCHWOOD=1 OR FETCHWATER=1 then code such individuals as 6 (Family worker).
--	--	--	--

			<p>In questionnaires that do not explicitly ask for primary and secondary jobs (eg. Malawi), ascertain the primary and secondary job by comparing and ranking the jobs in descending order of the time spent in each job. The comparison should be made from all sections (labor, enterprise, agriculture etc.), that ask questions over the past 12 months. Thus the job which takes most work hours is the primary job.</p> <p>However, even while following this methodology the above-mentioned sequence must be maintained, i. e. 12 month questions must be given precedence over 7 day questions and so on.</p> <p>Category definitions</p> <ol style="list-style-type: none"> 1) <i>Wage and salaried worker</i> is an individual employed by others outside the household including workers who are paid on a daily or hourly basis or based on task. 2) <i>Self-employed with employees</i> is an individual who runs a (farm or non-farm) household enterprise or farm that employs at least one non-household member for pay during the reference period. 3) A <i>self-employed without employees</i> is an individual who works alone with no paid employees. May have other family members categorized as family or family unpaid workers. May have an apprentice. Sometimes coded as “own account” worker in questionnaires. 4) An <i>employer</i> owns an incorporated business separate from the household, with paid employees. It could also be a large commercial farm. This category is coded only if reported as employer in the questionnaire. 5) <i>Apprentice</i> may or may not be paid 6) <i>Family worker</i> can be farm or non-farm. Note that family workers may be paid or unpaid. 7) The term <i>household enterprise</i> refers to
--	--	--	--

			<p>a non-farm business or home production activity that is run by household members. It needs not be physically located at the household dwelling unit. It refers to both :</p> <p>a) Businesses engaged in market based transactions and</p> <p>b) Activities designed to produce home consumption.</p>
L18	EMP_IND_SVY_1	Industry classification for primary employment	<p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. For all missing values and observations coded as 9, use the 7 day section.</p> <p>Keep the original classification of the survey. Most countries follow the ISIC classification.</p>
L19	INDUSTRY_1	1 digit Industry classification for primary employment <p><i>1 = Agriculture and Fishing</i> <i>2 = Mining</i> <i>3 = Manufacturing</i> <i>4 = Electricity and Utilities</i> <i>5 = Construction</i> <i>6 = Commerce</i> <i>7 = Transportation, Storage and Communication</i> <i>8 = Financial, Insurance and Real Estate</i> <i>9 = Services: Public Administration</i> <i>10 = Other Services</i> <i>11 = Unspecified</i></p>	<p>Use information from all sections (12 months/7 days/any other section) that may provide information.</p> <p>First use information from the 12 month section. For all missing values and observations coded as 9, use the 7 day section.</p> <p>If data allows generation of EMP_IND_SVY_1, recode it to generate INDUSTRY_1 according to SHIP requirements (refer Annexure-2).</p> <p>If data does not follow ISIC classification system, make appropriate assumptions to classify employment industry. Carefully document assumptions.</p> <p>Individuals identified in any section on agricultural activities are coded as 1(Agricultural and fishing).</p> <p>Individuals identified in a household enterprise section and where the industry of the enterprise is available, code them accordingly. In many household enterprise sections, the industry of the enterprise is not available. In such cases do not classify the individual in any industry.</p> <p>Heads of households engaged in agricultural</p>

			<p>activities are coded as 1 (Agriculture and Fishing)</p> <p>Heads of households owning household enterprises are coded according to the industry of the household enterprise, if this information is available; or left as un-coded if the industry of the enterprise is not available.</p> <p>Individuals identified as EMPLHOME=1 OR FETCHWOOD=1 OR FETCHWATER=1 are coded as 1 (Agriculture and fishing).</p>
L20	EMPFRM_1	<p>Farm employment in primary job 0 = No 1 = Yes</p>	<p>Farming activities include cultivating, sharecropping, forestry, raising livestock, bee-keeping, fishing and hunting.</p> <p>If INDUSTRY_1=1 then code as 1 (YES).</p> <p>If INDUSTRY_1=2 to 10 then code as 0 (No)</p> <p>If INDUSTRY_1 variable is missing or 11 (unspecified) , code EMPFRM_1 on the basis of all information available in any section of the survey.</p> <p>Individuals identified in household non-agricultural enterprises should be coded as 0(No). These individuals may have missing values for INDUSTRY_1, if the industry information of the enterprise was not available. Similarly heads of households owning non-agricultural enterprises should be coded as 0 (NO).</p> <p>As far as possible, EMPFRM_1 should be coded for all individuals coded as 1 to 9 in EMPTYPE_WB_1. Less than one percent of missing values are allowed for EMPFRM_1 if EMPTYPE_WB_1 has a meaningful value (i.e. NOT 99 (missing)).</p>
L21	EMPSEC_1	<p>Employment sector of primary job 1 = Public Government, Army 2 = State Owned 3 = Private or NGO</p>	<p>Code only for EMPTYPE_WB_1=1, 4, 5, 7, 9 (wage employees), otherwise code as missing.</p> <p>Classifies the main job's sector of activity for individuals with wage jobs.</p> <p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then, for all missing values and</p>

			<p>observations coded as 9, use the 7 day section.</p> <p><i>Armed forces and international institutions are included in Public sector.</i></p> <p><i>State owned</i> includes para-statal firms and all other enterprises in which the government has control.</p> <p>Note: if no such questions, leave as missing. This will mean that in the variable EMPCAT_1 wage jobs will not be further disaggregated. Do not code it on the basis of ISCO or ISIC codes.</p>
L22	CONTRACT	<p>Employment contract</p> <p>0 = No</p> <p>1 = Yes</p>	<p>Code only for EMPTYTYPE_WB_1=1, 4, 5, 7, 9 (wage employees), otherwise code as missing.</p> <p>Indicates if a person has a signed (formal) contract, regardless of the duration.</p> <p>This variable is constructed only if there is an explicit question about contracts otherwise code as missing.</p> <p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then for all missing values and observations coded as 9, use the 7 day section.</p>
L23	EMP_CAT_1	<p>Employment categories for primary job</p> <p><i>Wage worker</i></p> <p>11=wage public</p> <p>12=wage private non-agriculture</p> <p>13=wage private agriculture</p> <p><i>Self-employment/ nonwage</i></p> <p>21=family enterprise non-agri.</p> <p>22=family farmer</p> <p>31=Not known</p>	<p>This is a derived variable from EMPTYTYPE_WB_1, EMPSEC_1 and EMPFRM_1.</p> <p>If EMPTYTYPE_WB_1=1, 4, 5, 7, 9 then code as 1</p> <p>If EMP_CAT_1=1 and EMPSEC_1=1, 2 then code 11</p> <p>If EMP_CAT_1=1 and EMPSEC_1= 3 and EMPFRM_1!=1 then code 12</p> <p>If EMP_CAT_1=1 and EMPSEC_1= 3 and EMPFRM_1=1 then code 13</p> <p>If EMPTYTYPE_WB_1=2, 3, 6 then code as 2</p> <p>If EMP_CAT_1=2 and EMPFRM_1!=1 then code 21</p> <p>If EMP_CAT_1=2 and EMPFRM_1=1 then</p>

			<p>code 22</p> <p>If EMPTYTYPE_WB_1=10 then code as 31</p>
L24	WAGE_1	<p>Last wage payment in nominal local currency for primary employment</p>	<p>For EMPTYTYPE_WB_1=1, 4, 5, 7, 9 only (wage employees), otherwise code as missing.</p> <p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then, for observations coded as 9 and all missing values, use the 7 day section.</p> <p>Wage from main job (job to which the person dedicated most time in the week preceding the survey).</p> <p>Note: This includes tips, bonuses, and other cash payments. Do not include the monetary value of in-kind payments or perks associated with the job</p> <p>By definition non-paid employees should have wage=0.</p>
L25	UNITWAGE_1	<p>Time unit for wage in primary employment</p> <p><i>1 = Hourly</i> <i>2 = Daily</i> <i>3 = Weekly</i> <i>4 = Every two weeks</i> <i>5 = Twice per month</i> <i>6 = Monthly</i> <i>7 = Quarterly</i> <i>8 = Biannual</i> <i>9 = Annually</i> <i>10 = Other</i></p>	<p>Code only for EMPTYTYPE_WB_1=1, 4, 5, 7, 9 (wage employees), otherwise code as missing.</p> <p>Unit of time for the wage variable of the main job.</p> <p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then, for all missing values and observations coded as 9, use the 7 day section.</p>
L26	WHOURS_1	<p>Hours worked per week in primary employment</p>	<p>This is the usual number of hours worked per week in the main job.</p> <p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then, for all missing values and observations coded as 9, use the 7 day</p>

			<p>section.</p> <p>If only information on how many hours individuals worked per day is available, but no information on number of days worked per week is available, multiply the hours by 5 days.</p> <p>Similarly if hours worked per month is available, divide by 4.2 to get weekly hours.</p>
L27	SOU_AGRI_1	Source of individual income of primary employment: From self-employed agricultural job? <i>0 = No</i> <i>1 = Yes</i>	<p>Code as 1(YES) if the source of income is from self-employed agriculture activities, otherwise code as 0 (NO).</p> <p>If EMP_CAT_1! = . Then code as 0 Replace code = 1 If EMP_CAT_1=13 or 22</p>
L28	SOU_NFARM_1	Source of individual income of primary employment: From self-employed non-agricultural job? <i>0 = No</i> <i>1 = Yes</i>	<p>Code as 1(YES) if the source of income is from self-employed, non-farming activities, otherwise code as 0 (NO).</p> <p>If EMP_CAT_1! = . Then code as 0 Replace code = 1 If EMP_CAT_1=21</p>
L29	SOU_WAGE_1	Source of individual income of primary employment: From non-agricultural wage job? <i>0 = No</i> <i>1 = Yes</i>	<p>Code as 1(YES) if the source of income is from non-agricultural wage job, otherwise code as 0 (NO).</p> <p>If EMP_CAT_1! = . Then code as 0 Replace code = 1 If EMP_CAT_1=11 or 12</p>
L30	UNEMPLOYED_ILO	Unemployment ILO <i>0 = No</i> <i>1 = Yes</i>	<p>Individuals are considered as UNEMPLOYED if they meet ALL the following conditions:</p> <ol style="list-style-type: none"> 1. Did not work in the last 7 days (WORKED_7!=1) and 2. Were not absent from their job (ABSENT!=1) and 3. Looked for a job (LOOKJOB=1) <p>Code as 0 (NO) if WORKED_7=1 OR ABSENT=1</p> <p>To exclude 'employed individuals who are engaged in household duties from unemployed please replace:</p> <p>UNEMPLOYED_ILO=0 if EMPLHOME==1</p>
L31	EMPLOYED_WB	Employment WB <i>0 = No</i> <i>1 = Yes</i>	<p>This is a derived employment status that has the most inclusive definition.</p>

			<p>If LABFORCE_WB=1 then code 0;</p> <p>Replace code with 1 (YES) if WORKED_Y=1 or WORKED_7=1 or EMPLHOME=1 or ABSENT = 1 or EMPTYTYPE_WB_1! = 99.</p> <p>Replace code with 0 (NO) if EMPTYTYPE_WB_1 = 99.</p> <p>(If an individual worked in the last year or last 7 days or had a job to go back to or is an individual who fetched water/firewood/ or worked on family farm or raised livestock; then such an individual is considered employed.)</p> <p>Note: Do not miss-assign 0 to missing values. 0 should be coded if ANY of the variables use to derive this variable have non missing values. If ALL the values of the deriving variables are missing, then this variable should also be missing.</p>
L32	UNEMPLOYED_WB	Unemployment WB <i>0 = No</i> <i>1 = Yes</i>	<p>This is a derived unemployment status that has the most exclusive definition.</p> <p>If LABFORCE_WB =1 then code 0;</p> <p>Replace code with 1 (YES) if WORKED_Y! =1 and UNEMPLOYED_ILO = 1 and EMPTYTYPE_WB_1 = 99.</p> <p>Replace code with 0 (NO) if EMPTYTYPE_WB_1! = 99.</p> <p>(If an individual did not work in past one year and did not work in the past seven days and did not work on fetching water, firewood, etc. and looked for a job; then such an individual is considered unemployed).</p> <p>Note: Do not miss-assign 0 to missing values. 0 should be coded if ANY of the variables use to derive this variable have non missing values. If ALL the values of the deriving variables are missing, then this variable should also be missing.</p>
L33	LABFORCE_WB	Labor-force Participation WB <i>0 = No</i> <i>1 = Yes</i>	<p>This is a derived employment status that has the most inclusive definition.</p> <p>First Code 0 (NO) if WORKED_Y ==0 or EMPLOYED_7==0 or EMPLHOME==0 or ABSENT ==0 or UNEMPLOYED_ILO==0</p>

			<p>Replace with 1(YES) if WORKED_Y=1 or WORKED_7=1 or EMPLHOME=1 or ABSENT = 1 or UNEMPLOYED_ILO=1 or EMPTYTYPE_WB_1! =99.</p> <p>(If an individual worked for last year or last 7 days or had a job to go back to or an individual fetched water/firewood/ or worked on family farm or raised livestock, or is looking for a job; then such an individual is considered to be in the labor force).</p> <p>Note: Do not miss-assign 0 to missing values. 0 should be coded if ANY of the variables used to derive this variable have non missing values. If ALL the values of the deriving variables are missing, then this variable should also be missing.</p>
L34	HOURL_NECON	Hours spent per week on non-economic activities.	<p>One month = 4-weeks by convention.</p> <p>These include activities such as preparing food, and care for children.</p> <p>Fetching wood and water are considered economic activities and should not be included here.</p>

TABLE 2.4 SECONDARY EMPLOYMENT (CCD_YEAR_L.DTA)

No	NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
L35	EMPTYTYPE_WB_2	<p>Type of employment Secondary job</p> <p>1 = Wage & salaried worker</p> <p>2 = Self-employed with employees</p> <p>3 =Self-employed w/o employees</p> <p>4= Employer</p> <p>5 = Domestic employees (work for compensation for private house)</p> <p>6 = Family worker</p> <p>7= Apprentice</p> <p>9 = volunteer</p> <p>99 = Other /Not known/ Missing</p>	<p>To generate this variable only look for information in the following sequence:-</p> <ol style="list-style-type: none"> 1. First use the longest recall period (e.g. 12 month recall period) to code this variable 2. Replace the value of missing (coded 99) and volunteer/other (coded 9) based on information provided in sections with lesser recall periods (e.g. 7 day recall period) <p>Do not look for additional information beyond the secondary job section of the questionnaire.</p> <p>Do not code household heads or EMPLHOME or FETCHWOOD or FETCHWOOD as done in EMPTYTYPE_WB_1.</p>

L36	EMP_IND_SVY_2	Industry classification secondary employment	<p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then for all missing values and observations coded as other, use the 7 day section.</p> <p>Keep the original classification of the survey. Most countries follow the ISIC classification.</p>
L37	INDUSTRY_2	1 digit Industry classification secondary employment <i>Refer Annexure 2 for details</i> 1 = Agriculture and Fishing 2 = Mining 3 = Manufacturing 4 = Electricity and Utilities 5 = Construction 6 = Commerce 7 = Transportation, Storage and Communication 8 = Financial, Insurance and Real Estate 9 = Services, Public Administration 10 = Other Services 11 = Unspecified	<p>Classifies the second job of an individual with a second job. Should be missing otherwise.</p> <p>If data allows generation of EMP_IND_SVY_2, recode INDUSTRY_2 according to SHIP requirements (refer Annexure-2)</p> <p>If data does not follow ISIC classification system, make appropriate assumptions to classify employment industry. Carefully document assumptions in .do file.</p> <p>Do not code further based on implied information for household heads or EMPLHOME or FETCHWOOD or FETCHWOOD as was done in INDUSTRY_1.</p>
L38	EMPFRM_2	Farm employment in primary job 0 = No 1 = Yes	<p>Farming activities include cultivating, sharecropping, forestry, raising livestock, bee-keeping, fishing and hunting.</p> <p>If INDUSTRY_2=1 then code as 1 (YES).</p> <p>If INDUSTRY_2=2 to 10 then code as 0 (No)</p> <p>Do not code further based on implied information for household heads or EMPLHOME or FETCHWOOD or FETCHWOOD as was done in EMPFRM_1.</p>

L39	EMPSEC_2	Employment sector of primary job 1 = Public Government, Army 2 = State Owned 3 = Private, NGO	Code only for EMPTYTYPE_WB_2=1, 4, 5, 7, 9 (wage employees), otherwise code as missing. Classifies the sector of activity of the secondary job for individuals with wage jobs. Use information from all sections (12 months or 7 days) that ask this question. First use information from the 12 month section. For all missing values and for observations coded as 9, use the 7 day section. <i>Armed forces and international institutions are included in Public sector.</i> <i>State owned includes parastatal firms and all other enterprises in which the government has control.</i> Note: if no such question leave as missing. This will mean that the in the variable EMPCAT_2 wage jobs will not be further disaggregated. Do not code it on the basis of ISCO or ISIC codes.
L40	EMP_CAT_2	Employment categories for primary job 1= Wage worker 11=wage public 12=wage private non-agriculture 13=wage private agriculture 2 = Self-employment/nonwage 21=family enterprise non-agri. 22=family farmer	This is a derived variable from the EMPTYTYPE_WB_2, EMPSEC_2 and EMPFRM_2. If EMPTYTYPE_WB_2=1, 4, 5, 7, 9 then code as 1 If EMP_CAT_2=1 and EMPSEC_2=1, 2 then code 11 If EMP_CAT_2=1 and EMPSEC_2= 3 and EMPFRM_2=0 then code 12 If EMP_CAT_2=1 and EMPSEC_2= 3 and EMPFRM_1=1 then code 13 If EMPTYTYPE_WB_2=2, 3, 6 then code as 2 If EMP_CAT_2=2 and EMPFRM_2=0 then code 21 If EMP_CAT_2=2 and EMPFRM_2=1 then code 22
L41	WAGE_2	Last wage payment in nominal local currency for secondary employment	For EMPTYTYPE_WB_1=1, 4, 5, 7, 9 only (wage employees). Use information from all sections (12 months and 7 days) that ask this question. First use information from the 12 month section. Then, for all missing values and

			<p>observations coded as 9, use the 7 day section.</p> <p>Wage from secondary job. This includes tips, bonuses, and other wage payments.</p> <p>By definition non-paid employees should have wage=0.</p>
L42	UNITWAGE_2	<p>Time unit for wage in secondary employment</p> <p>1 = Hourly 2 = Daily 3 = Weekly 4 = Every two weeks 5 = Twice per month 6 = Monthly 7 = Quarterly 8 = Biannual 9 = Annually 10 = Other</p>	<p>Code only for EMPLOYEE_WB_1=1, 4, 5, 7, 9 (wage employees), otherwise code as missing.</p> <p>Unit of time for the wage variable of the secondary job.</p> <p>Use information from all sections (12 months and 7 days) that ask this question.</p> <p>First use information from the 12 month section. Then for all missing values and observations coded as 9, use the 7 day section.</p>
L43	WHOURS_2	<p>Hours worked in last week in secondary employment</p>	<p>This is the usual number of hours worked per week in the secondary job.</p> <p>Use information from all sections (12 months or 7 days) that ask this question.</p> <p>First use information from the 12 month section. For all missing values, use the 7 day section.</p> <p>If only information on how many hours individuals worked per day is available but no information on number of days worked a week is available, multiply the hours by 5 days.</p> <p>Similarly for hours worked per month divide by 4.2 to get weekly hours.</p>
L44	SOU_AGR_2	<p>Source of individual income of secondary employment:</p> <p>From self- employed Agricultural job?</p> <p>0 = No 1 = Yes</p>	<p>Code as 1(YES) if the source of income is from self-employed agriculture activities, otherwise code as 0 (NO).</p> <p>If EMP_CAT_2! =. OR EMP_CAT_2! =. Then code as 0</p> <p>Replace code = 1 If EMP_CAT_2=13 or 22</p>
L45	SOU_NFARM_2	<p>Source of individual inc of 2nd employment: from self-employed non-agri job?</p> <p>0 = No 1 = Yes</p>	<p>Code as 1(YES) if the source of income is from self-employed agriculture activities, otherwise code as 0 (NO).</p> <p>If EMP_CAT_2! =. Then code as 0</p> <p>Replace code = 1 If EMP_CAT_2=21</p>

L46	SOU_WAGE_2	Source of individual income of secondary employment: From a non-agricultural wage job? <i>0 = No</i> <i>1 = Yes</i>	Code as 1(YES) if the source of income is from self-employed agriculture activities, otherwise code as 0 (NO). If EMP_CAT_2! =. Then code as 0 Replace code = 1 If EMP_CAT_2=11 or 12
-----	-------------------	--	---

CHAPTER 3: MODULE III – HARMONIZED HOUSEHOLD-LEVEL VARIABLES

(All variables in this chapter to be included in the CCD_YEAR_H.dta)

This module records household-level information and includes household head characteristics and some selected information from individual-level module. Other information include housing characteristics and utilities, access to various amenities measured in terms of distances/time and ownership of durable goods among others. All variables are numeric unless otherwise stated.

TABLE 1.0 SAMPLE, GEOGRAPHY AND BASIC HOUSEHOLD IDENTIFIER (CCD_YEAR_H.DTA)

No	SHIP VARIABLE NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
1	COUNTRY	Country code	To be merged from CCD_YEAR_BASICINFO.dta
2	REGION	Region code and label the names	To be merged from CCD_YEAR_BASICINFO.dta
2b	PROVINCE	Province code and label the names	To be merged from CCD_YEAR_BASICINFO.dta
2c	DISTRICT	District code and label the names (if available)	To be merged from CCD_YEAR_BASICINFO.dta
3	HID	Household unique identification	To be merged from CCD_YEAR_BASICINFO.dta
4a	SURVEMO	Month of survey	To be merged from CCD_YEAR_BASICINFO.dta
4b	SURVEYR	Year of survey	To be merged from CCD_YEAR_BASICINFO.dta
5	RURURB	Area of residence <i>1 = Rural</i> <i>2 = Urban</i>	To be merged from CCD_YEAR_BASICINFO.dta
6a	HHSIZE	Household members	To be merged from CCD_YEAR_BASICINFO.dta
6b	HHSIZE_S	Household members including servants	To be merged from CCD_YEAR_BASICINFO.dta
7	WTA_S	Individual weighting coefficient	To be merged from CCD_YEAR_BASICINFO.dta
8	WTA_S_HHSIZE	Household weighting coefficient $WTA_S_HHSIZE = WTA_S * HHSIZE$	To be merged from CCD_YEAR_BASICINFO.dta

TABLE 3.1 HOUSEHOLD HEAD CHARACTERISTICS (CCD_YEAR_H.DTA)

No	NAME	LABEL and CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
H1	HHSEX	Sex of household Head <i>1 = Male</i> <i>0 = Female</i>	To be merged from CCD_YEAR_I.dta "SEX".
H2	HHAGEY	Age of household Head	To be merged from CCD_YEAR_I.dta "AGEY".
H3	HHMARST	Marital status of household Head <i>1 = Never married</i> <i>2 = Married monogamous</i> <i>3 = Married polygamous</i> <i>4 = Common law, union coutumiere, union libre, living together</i> <i>5 = Divorced/Separated</i> <i>6 = Widowed</i>	To be merged CCD_YEAR_I.dta "MARSTAT".
H4	HHEDLEV	Education level of household Head <i>0 = No education</i> <i>1 = Pre-school</i> <i>2 = Primary, not completed</i> <i>3 = Completed primary, but less than completed lower secondary</i> <i>4 = Completed lower secondary (or post-primary vocational education) but less than completed upper secondary</i> <i>5 = Completed upper secondary (or extended vocational/technical education)</i> <i>6 = Post-secondary technical</i> <i>7 = University and higher</i> <i>8 = Formal adult education or literacy program</i> <i>9 = Other</i>	To be merged from CCD_YEAR_I.dta "EDLEVEL_AR".
H5	HHEMSTAT	Employment status of household Head (usual) <i>0 = Unemployed</i> <i>1 = Employed</i>	To be merged from CCD_YEAR_L.dta. Use variable EMPLOYED_WB and UNEMPLOYED_WB from Labor module.
H6	HHEMTYPE	Employment type of household Head <i>1 = Wage & salaried worker</i>	To be merged from CCD_YEAR_L.dta. For primary job of household head only.

		2 = Self-employed with employees 3 = Self-employed w/o employees 4 = Employer 5 = Domestic employees (work for compensation for private house) 6 = Family worker 7 = Apprentice 9 = volunteer/Other	Use variable EMPTYTYPE_WB_1 from CCD_YEAR_L.dta
H7	HHINDUSTRY	Sector of activity of household Head 1 = Agriculture and fishing 2 = Mining 3 = Manufacturing 4 = Electricity and utilities 5 = Construction 6 = Commerce 7 = Transport, storage and communication 8 = Financial, insurance and real estate 9 = Services; Public administration 10 = Other services 11 = Unspecified	To be merged from CCD_YEAR_L.dta. For the primary job of household head only. Use variable INDUSTRY_1 from Labor module

TABLE 3.2 HOUSING AND UTILITIES (CCD_YEAR_H.DTA)

No	NAME	LABEL and CODES	COMMENTS, QUALITY CONTROL CHECKS and CORRECTIONS
H8	OWNHOUSE	Ownership of dwelling unit 1 = Yes 0 = No	YES refers to: (a) Actual ownership or (b) If household is in the process of purchasing the dwelling unit.
H9	ROOMS	Number of habitable rooms	This refers to number of rooms in the dwelling unit and may consist of one or more structures. Must be >= 1. Includes all rooms used for living, sleeping and eating. Excludes store, bathrooms and kitchens.
H 10	ROOF	Main material used for roof 1 = Concrete/cement/brick/stone 2 = Wood 3 = Bamboo/thatch	

		4 = Tiles/shingles 5 = Tin/metal sheets 6 = Makeshift 9 = Other	
H 11	WALLS	Main material used for external walls 1 = Concrete/cement/brick/stone 2 = Wood 3 = Bamboo/thatch 4 = Iron/metal sheets 5 = Clay/mud 6 = Makeshift 9 = Other	
H 12	FLOOR	Main material used for floor 1 = Cement/tiles/marble 2 = Wood/Bamboo 3 = Vinyl 4 = Earth/clay/mud 9 = Other	
H 13	WATER	Main source of water 1 = Pipe (own tap) 2 = Public standpipe 3 = Borehole 4 = Wells (protected) 5 = Wells (unprotected) 6 = Surface water 7 = Rain water 8 = Vendor/truck 9 = Other	Drinking water if specified.
H 14	ADISWAT	Actual distance to main water point (kms)	This refers to actual distance to water point (one way) used by household in kms. 1km = 1000 m; 1 km = 5/8 mile. If within dwelling, zero
H 15	ATIMWAT	Actual time taken to main water point (mins)	This refers to actual time taken to water point used by household. If roundtrip provided, divide by 2.
H 16	ELECTCON	Connection of electricity in dwelling 1 = Central/local 2 = Solar/wind 3 = Generator 9 = Other 0 = None	If electricity source connection cannot be determined code 9 (<i>Yes, but source unstated</i>).
H 17	FUELCOOK	Main cooking fuel 1 = Firewood 2 = Kerosene	<i>Other</i> includes fuel derived from coffee waste, saw dust, crop residue, cow dung among others.

		3 = Charcoal 4 = Electricity 5 = Gas 9 = Other	
H 18	FUELLIGH	Main lighting fuel 1 = Electricity 2 = Kerosene 3 = Candles 4 = Gas 9 = Other	
H 19	TOILET	Main toilet facility 1 = Flush toilet 2 = Improved pit latrine 3 = Pit latrine 4 = No facility 9 = Other	
H 20	GARBDISP	Garbage and trash disposal 1 = Collected 2 = Buried/burned 3 = Discarded in empty lots, street, rivers 9 = Other	Refers to only garbage or trash generated by household.
H 21	DISPSCH	Distance to nearest elementary/primary school (kms)	This refers to one-way distance to nearest primary school in kms.
H 22	DISPSCH1	Distance to nearest elementary/primary school 1 = Outside dwelling and up to 1 km 2 = >1-2 km 3 = >2-5 km 4 = >5-10 km 5 = Over 10 km 9 = Undefined	One-way
H 23	TIMPSCH	Time taken to nearest elementary/primary school (minutes)	One way
H 24	TIMPSCH1	Time taken to nearest elementary/primary school 1 = Within ½ hour 2 = >½ to 1 hour away 3 = >1 to 6 hours 4 = >6 to 12 hrs 5 = Over 12 hrs 9 = Undefined	One way
H 25	DISHEAL	Distance to nearest health facility (kms)	One way
H 26	DISHEAL1	Distance to nearest health	One way

		facility 1 = Outside dwelling and up to 1 km 2 = >1-2 km 3 = >2-5 km 4 = >5-10 km 5 = Over 10 km 9 = Undefined	
H 27	TIMHEAL	Time taken to nearest health facility (minutes)	One way
H 28	TIMHEAL1	Time taken to nearest health facility 1 = Within ½ hour 2 = >½ to 1 hour away 3 = >1 to 6 hours 4 = >6 to 12 hrs 5 = Over 12 hrs 9 = Undefined	One way

TABLE 3.3 OWNERSHIP OF DURABLE AND NON-DURABLE GOODS (CCD_YEAR_H.DTA)

No	NAME	LABEL AND CODES	COMMENTS, QUALITY CONTROL CHECKS AND CORRECTIONS
H 29	AGLAND	Ownership of agricultural land 1 = Yes 2 = Cannot be determined 3 = No	Country specific on definition of land ownership. This only refers to agricultural land . Some countries inquire about land ownership irrespective whether it is agricultural or non-agricultural purposes. If the survey is not explicit on type of land code 2 and skip to LANDSIZE.
H 30	AGLNDOW	Agricultural land owned by household (ha)	Refers only to agricultural land size in hectares. Check, if AGLAND==3 , code as 0 By convention 1 ha = 2.471 acres. Note: This would exclude rental farmers but include farm land owners who are not farmers.
H 31	OTHLNDOW	Non Agricultural land owned by household (ha)	Refers only to non-agricultural land size in hectares. By convention 1 ha = 2.471 acres.
H 32	LANDSIZE	Land size owned by household (ha)	Area of all land owned by household regardless of use, that is, both agricultural and non-agricultural. By convention 1 ha = 2.471 acres.

H 33	AREA_IRRIG	Area of irrigated agricultural land (ha)	
H 34	AREA_NONIRRIG	Area of non-irrigated agricultural land (ha)	
H 35	AREA_COLLAT	Total plot areas can be used as collateral for loan (ha)	
H 36	LANDCON	Conflict about the land <i>1 = Yes</i> <i>0 = No</i>	
H 37	RADIO	Ownership of radio <i>1 = Yes</i> <i>0 = No</i>	Functioning radio includes a radio, radio cassette, and 3-in-1-radio cassette.
H 38	TV	Ownership of television <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning television in house.
H 39	PHONE	Ownership of landline (fixed) phone <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning fixed land line telephone in house.
H 40	CPHONE	Ownership of at least one cellular phone <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning cellular in house.
H 41	INTERNET	Access to internet <i>1 = Yes</i> <i>0 = No</i>	Include either inside or outside the house.
H 42	FRIDGE	Ownership of frig <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning refrigerator in house.
H 43	SEWMACH	Ownership of sewing machine <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning sewing machine in house.
H 44	COMPUTER	Ownership of computer <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning computer in house.
H 45	STOVE	Ownership of stove <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning stove or cooker in house.
H 46	OX CART	Ownership of animal cart <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning animal cart, which is used as a means of transport or a farm tool.
H 47	BCYCLE	Ownership of bicycle <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning bicycle.
H 48	BOAT	Ownership of boat <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning boat or canoe.

H 49	MCYCLE	Ownership of motorcycle <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning motorcycle is important.
H 50	CAR	Ownership of private car <i>1 = Yes</i> <i>0 = No</i>	Presence of a functioning car is important. This refers to car for household use and NOT a commercial vehicle.
H 51	LLIVESK	Number of large-sized livestock owned	This question asks the actual number of large-sized livestock. These include cattle, camels, donkeys and horse.
H 52	MLIVESK	Number of medium-sized livestock owned	This question asks the actual number of medium-sized livestock. These include sheep, goats and pigs.
H 53	POULTRY	Number of poultry owned	This question asks the actual number of poultry/birds. These include all forms of birds such as chicken, geese, and doves.

TABLE 3.4 HOUSEHOLD EXPENDITURE (CCD_YEAR_H.DTA)

H 54	PCEXP	Per capita annual food and non-food consumption expenditure in national currency, not regionally deflated	To be merged from CCD_YEAR_E.dta.
H 55	PCEXPDR	Per capita annual food and non-food consumption expenditure in national currency, adjusted by regional food price indices, and <i>cleaned</i>.	To be merged from CCD_YEAR_E.dta Per capital annual food and non-food consumption is first adjusted by regional food price indices. Then outliers (separately for food and non-food expenditure) greater than three standard deviations are replaced with the medians of their correspondent per capita food and non-food consumption by region and rural/urban.
H 56	PCEXPDR_PPP	Per capita annual food and non-food consumption expenditure in real terms, converted to 2005 \$PPP using 2005 \$PPP exchange rate	To be merged from CCD_YEAR_E.dta Calculated using PCEXPDR, CPI of the survey year, and 2005 \$PPP conversion factor. When the regional food price deflators are not available, remove the outliers in PCEXP following the same procedures as removing the outliers in PCEXPDR, and calculate PCEXP_PPP using PCEXP, CPI of the survey year, and 2005 \$PPP conversion factor.
H 57	QUINTILE_N	Income quintiles at the national level	Calculated based on PCEXPDR_PPP, and weighted by population weights.
H 58	QUINTILE_RU	Income quintiles by rural/urban	Calculated based on PCEXPDR_PPP, and weighted by population weights.

TABLE 3.5 HOUSEHOLD REMITTANCES (CCD_YEAR_H.DTA)

H 59a	SEX_RMT_1	Sex of the 1st, 2nd, and 3rd remittance sending member <i>1 = Male</i> <i>0 = Female</i>	The order of the sending members is in decreasing order of amount of remittance (remittance includes cash, gifts and food).
H 59b	SEX_RMT_2		
H 59c	SEX_RMT_3		
H 60a	RELAT_RMT_1	Relationship to the household head of the 1st, 2nd, and 3rd remittance sending member <i>2 = Spouse</i> <i>3 = Son/daughter</i> <i>4 = Parents/grandparents</i> <i>5 = Grandchild</i> <i>6 = Son/daughter-in-law</i> <i>7 = Siblings and other relative</i>	The order of the sending members is in decreasing order of amount of remittance (remittance includes cash, gifts and food).
H 60b	RELAT_RMT_2		
H 60c	RELAT_RMT_3		
H 61a	DES_MIG_1	Destination of migration of the 1st, 2nd, and 3rd remittance sending member <i>1 = Capital</i> <i>2 = Within the country (but not capital)</i> <i>3 = Abroad</i>	The order of the sending members is in decreasing order of amount of remittance (remittance includes cash, gifts and food).
H 61b	DES_MIG_2		
H 61c	DES_MIG_3		
H 62	ORIGIN_RMT	Origin of the remittances <i>1 = Domestic</i> <i>2 = Abroad</i> <i>3 = Both</i>	Location category from where the household has received remittances.
H 63a	AMT_RMT_1	Amount of annual remittance by the 1st, 2nd, and 3rd remittance sending member	The order of the sending members is in decreasing order of amount of remittance (remittance includes cash, gifts and food).
H 63b	AMT_RMT_2		
H 63c	AMT_RMT_3		
H 64	INC_RMT	Total amount of annual remittances received from remittance sending members (annual)	The total includes the remittances from the most important three migrant members and others.

TABLE 3.6 HOUSEHOLD INCOME VARIABLES (CCD_YEAR_H.DTA)

H 65	INC_WAGE	Wage and salaries (annual)	Aggregated from individual data.
H 66	INC_SOCA	Bonus and social allowances derived from wage jobs (annual)	Aggregated from individual data.
H 67	INC_FARM_G	Gross income from household farm businesses (annual)	Gross receipt/revenue. Income from leasing agricultural land is counted in INC_RENT.
H 68	INC_NFARM_G	Gross income from household nonfarm businesses (annual)	Gross receipt/revenue. Gross receipt/revenue minus operating cost (as reported).
H 69	INC_RENT	Rental income (annual)	Income from selling or leasing land, houses, and other properties. Most survey questionnaires have asked about both rent from leasing land and houses in the housing module, and rent from leasing land in the agricultural module. Count both, assuming there's no overlap.
H 70	INC_FIN	Financial income (annual)	Income from savings, dividends, loans, tax refunds, and maturity payment on insurance
H 71	INC_PEN	Pensions/ social assistance (annual)	Income from pensions and other social assistance. A similar variable is in the labor module. However, that is at an individual level whereas this is at a household level.
H 72	INC_STUDY	Study support (annual)	Income from scholarships, stipends, or other study support
H 73	INC_OTH	Other income (annual)	
H 74	INC_TOT_G	Total gross household income, (annual)	In national currency. Total of labor income and non-labor incomes including financial income, remittances, pensions and other social assistance, study support and other. Sum of all variables starting with INC_. (Include INC_RMT from section 3.6)

Note:

- a) Any variable, for which information is not collected by the country, should be created and left as system missing in the final harmonized aggregated expenditure file.
- b) The order of variables should follow as shown above for ease in reference use.

CHAPTER 4: MODULE IV – HARMONIZED EXPENDITURE VARIABLES

The following guidelines should be kept in mind:

- a) Before starting the expenditure aggregation, household size must be first calculated. This is because using expenditure per capita one can determine outliers.
- b) If a particular sub-category does not exist in the survey data, list all values as missing.
- c) All expenditures should be annualized.
- d) Although the summary tables are produced with great care to make the sub-aggregates as well defined and exhaustive as possible, the users will still need to make circumstantial (important) decisions. Thus all computer programs should be attached so the aggregation can be appropriately documented.²

The following 14 expenditure files (File 1 to File 14) must be generated, which serve as the record of processing expenditure aggregation and ensure the replicability of the SHIP variables from the original survey data.

Contents	Sequence	Table	SHIP Output Data File
Household composition	File 0	Table 0	00_BASICINFO.dta
Food and non-alcoholic beverages	File 1	Table 4.1	01_EXPFOOD.dta
Alcoholic beverages, tobacco and narcotics	File 2	Table 4.2	02_EXPALCH.dta
Clothing and footwear	File 3	Table 4.3	03_EXPCLTH.dta
Housing, water, electricity, gas and other fuels	File 4	Table 4.4	04_EXPHOUS.dta
Furnishings, household equipment, etc.	File 5	Table 4.5	05_EXPFURN.dta
Health	File 6	Table 4.6	06_EXPHLTH.dta
Transport	File 7	Table 4.7	07_EXPTRSP.dta
Communication	File 8	Table 4.8	08_EXPRCRE.dta
Recreation and culture	File 9	Table 4.9	09_EXPCMNO.dta
Education	File 10	Table 4.10	10_EXPEDUC.dta
Restaurants and hotels	File 11	Table 4.11	11_EXPHOTL.dta
Miscellaneous goods and services	File 12	Table 4.12	12_EXPMISC.dta
Regional food price deflators	File 13	Table 4.13	13_FDPINDEX.dta
Total household expenditures	File 14	Table 4.14	CCD_YEAR_E.dta

² Users can also reference other literature on methodology of compiling consumption aggregates. Deaton, Angus and Salman Zaidi (2002), Guidelines for Constructing Consumption Aggregates for Welfare Analysis, Living Standards Measurements Study Working Paper Number 135, The World Bank: Washington DC.

TABLE 1.0: HOUSEHOLD COMPOSITION AND WEIGHTS SUMMARY TABLE

	Variable name	Variable definition	From
1	COUNTRY	Country code	00_BASICINFO.dta
2	REGION	Region code and label the names	00_BASIC INFO.dta
3	HID	Household unique identification	00_BASIC INFO.dta
4a	SURVEMO	Month of survey	00_BASIC INFO.dta
4b	SURVEYR	Year of survey	00_BASIC INFO.dta
5	RURURB	Area of residence <i>1 = Rural</i> <i>2 = Urban</i>	00_BASIC INFO.dta
6a	HHSIZE	Household members	00_BASIC INFO.dta
6b	HHSIZE_S	Household members including servants	00_BASIC INFO.dta
7	WTA_S	Individual weighting coefficient	00_BASIC INFO.dta
8	WTA_S_HHSIZE	Household weighting coefficient $WTA_S_HHSIZE = WTA_S * HHSIZE$	00_BASIC INFO.dta

TABLE 4.1: FOOD EXPENDITURES

All variables are annualized and in current local nominal prices

	Variable name	Variable definition	SHIP output data file
3	HID	Household unique ID	01_EXPFOOD.dta
E1	FDRECALL	Food purchase recall period, in weeks. By convention 1 week = 7 days.	01_EXPFOOD.dta
E2	FD_B	Total expenditure on purchased food. Beverages, tobacco, catering and restaurant foods are excluded	01_EXPFOOD.dta
E3	FDNONALC_B	Total expenditure on purchased non-alcoholic beverages	01_EXPFOOD.dta
E4	FD_P	Total value of food other than purchased, such as self-produced, in-kind receipts, etc., beverages and tobacco excluded	01_EXPFOOD.dta
E5	FDNONALC_P	Total value of non-alcoholic beverages other than purchased, such as self-produced, in-kind receipts, etc.	01_EXPFOOD.dta
E6	TOTFOOD	Total food expenditure, sum of variables with prefix FD (<i>Exclude FDRECALL</i>)	01_EXPFOOD.dta

TABLE 4.2: ALCOHOLIC BEVERAGES, TOBACCO AND NARCOTICS

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>SHIP output data file</i>
3	HID	Household unique ID	02_EXPALCH.dta
E7	FDALC_B	Total expenditure on purchased alcoholic beverages	02_EXPALCH.dta
E8	FDALC_P	Total value of alcoholic beverages other than purchased, such as self-produced, gifts received, etc.	02_EXPALCH.dta
E9	TOBACCO	Sum of total expenditure on purchased tobacco and tobacco products, and total value of tobacco received in-kind or self-produced	02_EXPALCH.dta
E10	NARCOTICS	Sum of total expenditure on purchased narcotics and narcotics products, and total value of narcotics received in-kind or self-produced	02_EXPALCH.dta
E11	TOTALCH	Total expenditures on alcoholic beverages, tobacco and narcotics, sum of all above variables	02_EXPALCH.dta

TABLE 4.3: CLOTHING AND FOOTWEAR

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>SHIP output data file</i>
3	HID	Household unique ID	03_EXPCLTH.dta
E12	HSCLOTH	Total expenditure on clothing, including self-produced and in-kind receipts	03_EXPCLTH.dta
E13	HSFOOTW	Total expenditure on footwear, including self-produced and in-kind receipts	03_EXPCLTH.dta
E14	TOTCLTH	Total expenditure on clothing and footwear, including self-produced and in-kind receipts, sum of the above two variables	03_EXPCLTH.dta

TABLE 4.4: HOUSING, WATER, ELECTRICITY, GAS AND OTHER FUELS

For ship files, rent is not included in the final total household expenditure because in SSA normally over 80 percent of households live in their own houses and do not pay mortgage. There is no rental market in rural areas where majority population lives. However, self-reported actual rent variable should be in this file if the rent question is asked. The user can also impute rent for households who do not pay rent or mortgage, which however, is not required by SHIP file.

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>Data files</i>
3	HID	Household unique ID	04_EXPHOUS.dta
E15	RENT_ACT	Actual rentals for housing	04_EXPHOUS.dta

E16	RENT_IMP	Imputed housing for rental	04_EXPHOUS.dta
E17	HSREPAIR	Maintenance and repair of dwelling	04_EXPHOUS.dta
E18	HSWATER	Water supply and miscellaneous services relating to the dwelling such as garbage collection fees	04_EXPHOUS.dta
E19	HSFUEL	Firewood, and charcoal	04_EXPHOUS.dta
E20	GAS	Gas for cooking	04_EXPHOUS.dta
E21	ELEC	Electricity	04_EXPHOUS.dta
E22	HSKEROSENE	Kerosene (Paraffin)	04_EXPHOUS.dta
E23	HSDIESEL	Diesel for all purposes except transportation. Note: If in the questionnaire does not specify the purpose of diesel use, include it in TRFUEL in Transport Expenditures in Table 4.7.	04_EXPHOUS.dta
E24	HSUTILITY	Electricity and gas (row total of GAS and ELEC)	04_EXPHOUS.dta
E25	TOTHOUS	Total expenditures on housing, sum of variables with the prefix HS	04_EXPHOUS.dta

TABLE 4.5: FURNISHINGS, HOUSEHOLD EQUIPMENT AND ROUTINE HOUSEHOLD MAINTENANCE

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>SHIP output data file</i>
3	HID	Household unique ID	05_EXPFURN.dta
E26	HSFURNI	Furniture and furnishings, carpets and other floor coverings.	05_EXPFURN.dta
E27	HSTEXTIL	Household textiles such as beddings, and drapes.	05_EXPFURN.dta
E28	HSAPPLIAN	Household appliances	05_EXPFURN.dta
E29	HSUTENSIL	Glassware, tableware, kitchenware, and household utensils.	05_EXPFURN.dta
E30	HSTOOLS	Tools and equipment for house and garden	05_EXPFURN.dta
E31	HSSERV	Goods and services for routine household maintenance, e.g., cleaning products, domestic services.	05_EXPFURN.dta
E32	TOTFURN	Total furnishing etc. expenditure, sum of all variables with the prefix HS	05_EXPFURN.dta

TABLE 4.6: HEALTH CARE EXPENDITURES

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>SHIP output data file</i>
3	HID	Household unique ID	06_EXPHLTH.dta
E33	HLMEDI	Medical products, appliances and equipment	06_EXPHLTH.dta
E34	HLOUTP	Outpatient services	06_EXPHLTH.dta
E35	HOSP	Hospitalization expenditure	06_EXPHLTH.dta
E36	TOTHLTH	Total health expenditures, sum of all variables with the prefix HL (Do NOT include HOSP)	06_EXPHLTH.dta

TABLE 4.7: TRANSPORT EXPENDITURES

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>Data files</i>
3	HID	Household unique ID	07_EXPTRSP.dta
E37	VEHICLES	Purchase of vehicles	07_EXPTRSP.dta
E38	TRFUEL	Fuels for transportation, such as petrol, diesel, etc... Note: If in the questionnaire does not specify the purpose of diesel/petrol use, include it in TRFUEL.	07_EXPTRSP.dta
E39	TRPERSON	Operation of personal transport equipment, such as repairs and hire of chauffeurs, but excluding fuel.	07_EXPTRSP.dta
E40	TRSERVE	Transport services, such as public transportation, purchase of airplane tickets, etc.	07_EXPTRSP.dta
E41	TOTTRSP	Total transport expenditures, sum of all variables with the prefix TR (Do NOT include Vehicles)	07_EXPTRSP.dta

E61	TOTHOTL	Total Restaurants and hotel expenditures, sum of the variables with HOT	11_EXPHOTL.dta

TABLE 4.12: MISCELLANEOUS GOODS AND SERVICES

All variables are annualized and in current local nominal prices

	<i>Variable name</i>	<i>Variable definition</i>	<i>SHIP Output Data files</i>
3	HID	Household unique ID	12_EXPMISC.dta
E62	MISPERSN	Personal care, e.g., hairdressing, electronic appliances for personal care.	12_EXPMISC.dta
E63	MISPROST	Spending on prostitution	12_EXPMISC.dta
E64	MISPEREFF	Personal effects not mentioned elsewhere	12_EXPMISC.dta
E65	MISSPROT	Contribution to social protection	12_EXPMISC.dta
E66	MISINSUR	Premium paid for insurances, including housing, health, etc.	12_EXPMISC.dta
E67	MISFINAN	Financial services	12_EXPMISC.dta
E68	MISOTHER	Other services not mentioned elsewhere. Include Ceremonies such as weddings/funerals etc. if they are not found to be lumpy expenditures i.e. more than 5% of the total households incurred it.	12_EXPMISC.dta
E69	TOTMISC	Total miscellaneous spending, sum of all variables with the prefix MIS	12_EXPMISC.dta

TABLE 4.13: REGIONAL PRICE DEFLATORS (OPTIONAL)

Normally regional food price and/or price deflators are included in the original survey data files. In this case, do not create FDINDEX from the survey data. Just use the food price index/price index in the original survey data as FDINDEX. If there is no price deflator in the original survey and there are good price data in the survey, then FDINDEX can be created using tables 4.13.1 and 4.13.2. However, if there is no good price data in the survey, which is often the case, FDINDEX should be left missing and no regional deflated consumption will be available at the final expenditure file.

Table 4.13.1 Sub-File

	Variable name	Variable definition	Syntax and data files
A	REGION	ID for regions, the lowest level to calculate price index	13a_Pindex1.dta
B	FDID	ID for items, select 20 items that have the largest food share	13a_Pindex1.dta
C	FDRPRICE	Regional food prices for the 20 selected items	13a_Pindex1.dta
D	FDSHR	Normalize the 20 item food shares to 100 percent	13a_Pindex1.dta
E	FDINDEX	Regional food price deflator.	13a_Pindex1.dta

Note:

- a) The FDINDEX will be MERGED into CCD_YEAR_E.dta based on the lowest level to calculate price index, normally at regional level. Therefore households in the same region will have identical values for FDINDEX.
- b) FDINDEX is calculated as $FDINDEX = \frac{\sum_{i=1}^{20} p^i \times q^i}{\sum_{i=1}^{20} p^i \times q^i}$ where p^i is the regional price, p^i is national average price and q^i is the national average food share.

Table 4.13.2 Food Price Index

	Variable name	Variable definition	Data files
2	REGION	ID for regions, the lowest level to calculate price index	13_FDPINDEX.dta
E70	FDPINDEX	Regional food price deflators.	13_FDPINDEX.dta

TABLE 4.14: TOTAL ANNUAL HOUSEHOLD EXPENDITURES (CCD_YEAR_E.DTA)

Merge Tables 1.0, 4.1 – 4.13

	SHIP Variable	SHIP Variable definition
1	COUNTRY	Country code
2	REGION	Region code and label the names
3	HID	Household unique identification
4a	SURVEMO	Month of survey
4b	SURVEYR	Year of survey
5	RURURB	Area of residence: 1 = Rural; 2 = Urban
6a	HHSIZE	Household members
6b	HHSIZE_S	Household members including servants
7	WTA_S	Individual weighting coefficient
8	WTA_S_HHSIZE	Household weighting coefficient: $WTA_S_HHSIZE = WTA_S * HHSIZE$
E6	TOTFOOD	Food and non-alcoholic beverages
E11	TOTALCH	Alcoholic beverages, tobacco and narcotics
E66	TOTFDAL	Sum of TOTFOOD(E6) and TOTALCH(E11)
E14	TOTCLTH	Clothing and footwear
E24	HSUTILITY	Electricity and gas
E19	HSFUEL	Firewood, and charcoal
E20	GAS	Gas for cooking
E21	ELEC	Electricity
E22	HSKERSENE	Kerosene (Paraffin)
E23	HSDIESEL	Diesel for all purposes except transportation
E25	TOTHOUS	Housing, water, electricity, gas and other fuels
E32	TOTFURN	Furnishings, household equipment, and routine household maintenance
E36	TOTHLTH	Health
E38	TRFUEL	Fuel for transportation, such as petrol, diesel, etc.....
E 39	TRPERSON	Operation of personal transport equipment, such as gas, repairs and hire of chauffeurs
E 40	TRSERVE	Transport services: public transportation, purchase of airplane tickets, etc.
E41	TOTTRSP	Transportation
E45	TOTCMNQ	Communication
E52	TOTRCRE	Recreations and culture
E58	TOTEDUC	Education
E61	TOTHOTL	Restaurants and hotels
E69	TOTMISC	Miscellaneous goods and services
E71	TOTNFD	Sum of all non-food expenditure variables
E70	FDPINDEX	Regional food price deflators
E72	HHEXP_N	Total annual nominal household expenditures
E73	HHEXP_R	Total annual real household expenditures, TOTFOOD is deflated by FDPINDEX, and non-food expenditures are not deflated
E74	CPI2005_DEF	CPI to deflate/inflate the HHEXP_R to 2005 local prices
E75	PPP2005	2005 PPP exchange rate to 2005 local currency

Note: All missing values for expenditure aggregates must be recoded to 0 in the Total Annual Expenditure file (CDD_YEAR_E.dta)

CHAPTER 5: DOCUMENTATION AND COMPUTER PROGRAMS

For each harmonized data file, a short document should be written, containing at least the following information:

- a) Date of production of the harmonized data files.
- b) Person responsible for production.
- c) Extrapolated population, by Urban/Rural area.
- d) Definition of the variable HID (this variable is usually the concatenation of several variables in the original dataset; these variables must be clearly identified, in order to facilitate the link with the original dataset).
- e) All data editing checks (cleaning and assumptions) should be documented in the computer programs as comments.
- f) Imputations and assumptions made (number of cases and method) should be recorded meticulously.
- g) Computer programs should be attached in sequence.
- h) Comments and warnings to the users (limits in survey coverage, reliability of data, etc).
- i) Any other information pertaining to the data that might be useful to data users.

APPENDIX I: THE METHODOLOGY OF CONSTRUCTING EMPLOYMENT VARIABLES IN SHIP

The construction of employment and labor participation variables is specific to Sub-Saharan African context since over 80 percent of employment activities are in the informal sector. Studying labor participation in Tanzania, Bardasi, Beegle, Dillon and Serneel found that due to poor questionnaire design many unpaid family workers under reported their economic activities, especially women who reported domestic duties as the main activity. These individuals inevitably undertake some unpaid economic activities such as cultivating, raising livestock, fetching water, and collecting wood (preparing meals for the family and caring for own children are not classified as economic activities by ILO definition.) The Survey-Based Harmonized Indicator Program (SHIP) developed complementary steps to capture these under-reported economic activities.

Additionally, due to informal economic activities and under-reported employment, there are often many missing values for the industry of employment based on ISIC code. To remedy this situation we create a variable to classify industry into farm and non-farm sectors that can be gleaned from other modules of the survey, such as farm, household enterprises and time use modules.

The steps outlined below are designed to capture, to the greatest extent possible, the actual employment status, including women who work from home and take care of household responsibilities at the same time, and students who help with fetching wood and water.

Construction of labor variables based on SHIP methodology

In the SHIP manual, we construct labor force participation (LABFORCE_WB) first (Table 1), followed by the variables EMPLOYED_WB (Table 2). Please note that because seasonality is a significant issue in capturing informal employment we code SHIP employment variables based on 12 month information, followed by 7day/two-week information. We follow ILO definition broadly with supplementary steps to capture under-reported employment. It is important to keep in mind that supplementary steps only replace missing values generated from previous steps.

The final employment variable of interest is EMP_CAT_1 (Table 5), which provides statistics to monitor structural changes in employment, classified into five categories as follows:

EMP_CAT_1 (Table 5)		11 Wage public
		12 Wage private non-agriculture
		13 Wage private agriculture
		21 Self-employed non-agriculture (household enterprises)
		22 Self-employed agriculture (farmers).

It should be noted that there is a small overlap between employment by SHIP definition and unemployment by ILO definition. By ILO definition, anyone who is without a job and looking for a job in a reference period (normally from 7 to 2 weeks) should be classified as unemployed. However, these individuals may have worked in the last 12 months, classified as employed by SHIP definition. Because of the large proportion of informal employment and the almost absence of unemployment benefits, the status between employed and unemployed is often blurred and has no practical implications. For this reason, this small overlap has no significance in analyzing labor force participation.

Below are summary tables on construction of most important SHIP employment variables. The sequence corresponds to the precedence of information, i.e. the later steps only replace missing values generated by previous steps.

Table 1: Construction of **LABFORCE_WB**

Variable Names			Description
LABFORCE_WB	YES, in the labor force, if ANY of the conditions is YES	WORKED_12=YES	Did the Individual have any kind of employment for any duration of time within the last 12 month recall period?
		WORKED_7=YES	Did the individual have any kind of employment for any duration of time within the last 7 day recall period?
		ABSENT=YES	If the individual did not work in the past 7 days did he/she have a job to return to?
		LOOKJOB=YES	Did the individual look for a job in the reference period (7days, 2 weeks or 4 weeks)?
		EMPTYTYPE_WB_1≠99	Type of employment based on information in the employment section and other sections of the survey. (Table 3 and Flowchart 1).
	NO	WORKED_12=NO WORKED_7=NO ABSENT=NO LOOKJOB=NO EMPTYTYPE_WB_1=99	If ALL the conditions are satisfied.
	MISSING	WORKED_12=. WORKED_7=. ABSENT=. LOOKJOB=. EMPTYTYPE_WB_1=99	If ALL the conditions are satisfied.

Table 2: Construction of **EMPLOYED_WB**

Variable Names			Description
EMPLOYED_WB	YES, if ANY of the conditions are satisfied	WORKED_12=YES	Did the Individual have any kind of employment for any duration of time within the last 12 month recall period? It is based on an employment screening question, otherwise missing.
		WORKED_7=YES	Did the individual have any kind of employment for any duration of time within the last 7 day recall period? It is based on an employment screening question, otherwise missing.
		ABSENT=YES	If the individual did not work in the past 7 days did he/she have a job to return to?
		EMPTYTYPE_WB_1≠99	Type of employment based on information in the employment section and other sections of the survey. (Table 3 and Flowchart 1).
	NO	LABFORCE_WB=YES	If the individual is part of the labor-force but does not have a job as identified by the above four variables.
	MISSING	LABFORCE_WB=.	If no information on labor force participation.

Description of EMPTYTYPE_WB_1

EMPTYTYPE_WB_1 is the most important variable in the SHIP Labor-force module. Information is sought from all sections of the survey including the household enterprise and the farming sections. By design it has no missing values. Individuals for whom no information can be found (include “not known,” “other”, and no response/not applicable) are coded as 99. EMPTYTYPE_WB_1 classifies the type of employment into 8 different types.

Table 3: Description of codes in **EMPTYWB_1**

Code	Label	Definition
1	Wage and salaried worker	An individual employed by non-household members who are paid in cash or in kind on a regular basis or based on a task. Agricultural and non-agricultural laborers are included in this category.
2	Self-employed with employees	An individual who runs a farm or a non-agricultural enterprise and employs at least one non-household member. Some surveys have information on employment of non-household members and is used to define this category.
3	Self-employed without employees	An individual who runs a farm or a non-agricultural enterprise and DOES NOT employ any non-household member. If the survey does not have information on employment of non-household members then individuals are by default classified in this category. Some surveys have a category called 'own account worker'; such individuals are categorized in this section.
4	Employer	Refers to the owner of a business with employees, irrespective of agricultural or non-agricultural sector. Individuals are classified only if the survey explicitly has 'employer' as a category.
5	Domestic employees	An individual who works for a domestic household. Some surveys that have a question on job description may have this information.
6	Family worker	An individual who is a paid or unpaid worker who assists in the work on a farm or a non-farm enterprise.
7	Apprentice	Individuals who are apprentices, irrespective of whether paid or unpaid
9	Volunteer	An individual who is a volunteer, stated as an explicit category in the questionnaire.
99	Other/Not known/missing	All individuals who respond as other or not known or have a non-response value. Additional information from other sections of the survey is gleaned to reclassify these individuals into one of the above mentioned categories where-ever possible.

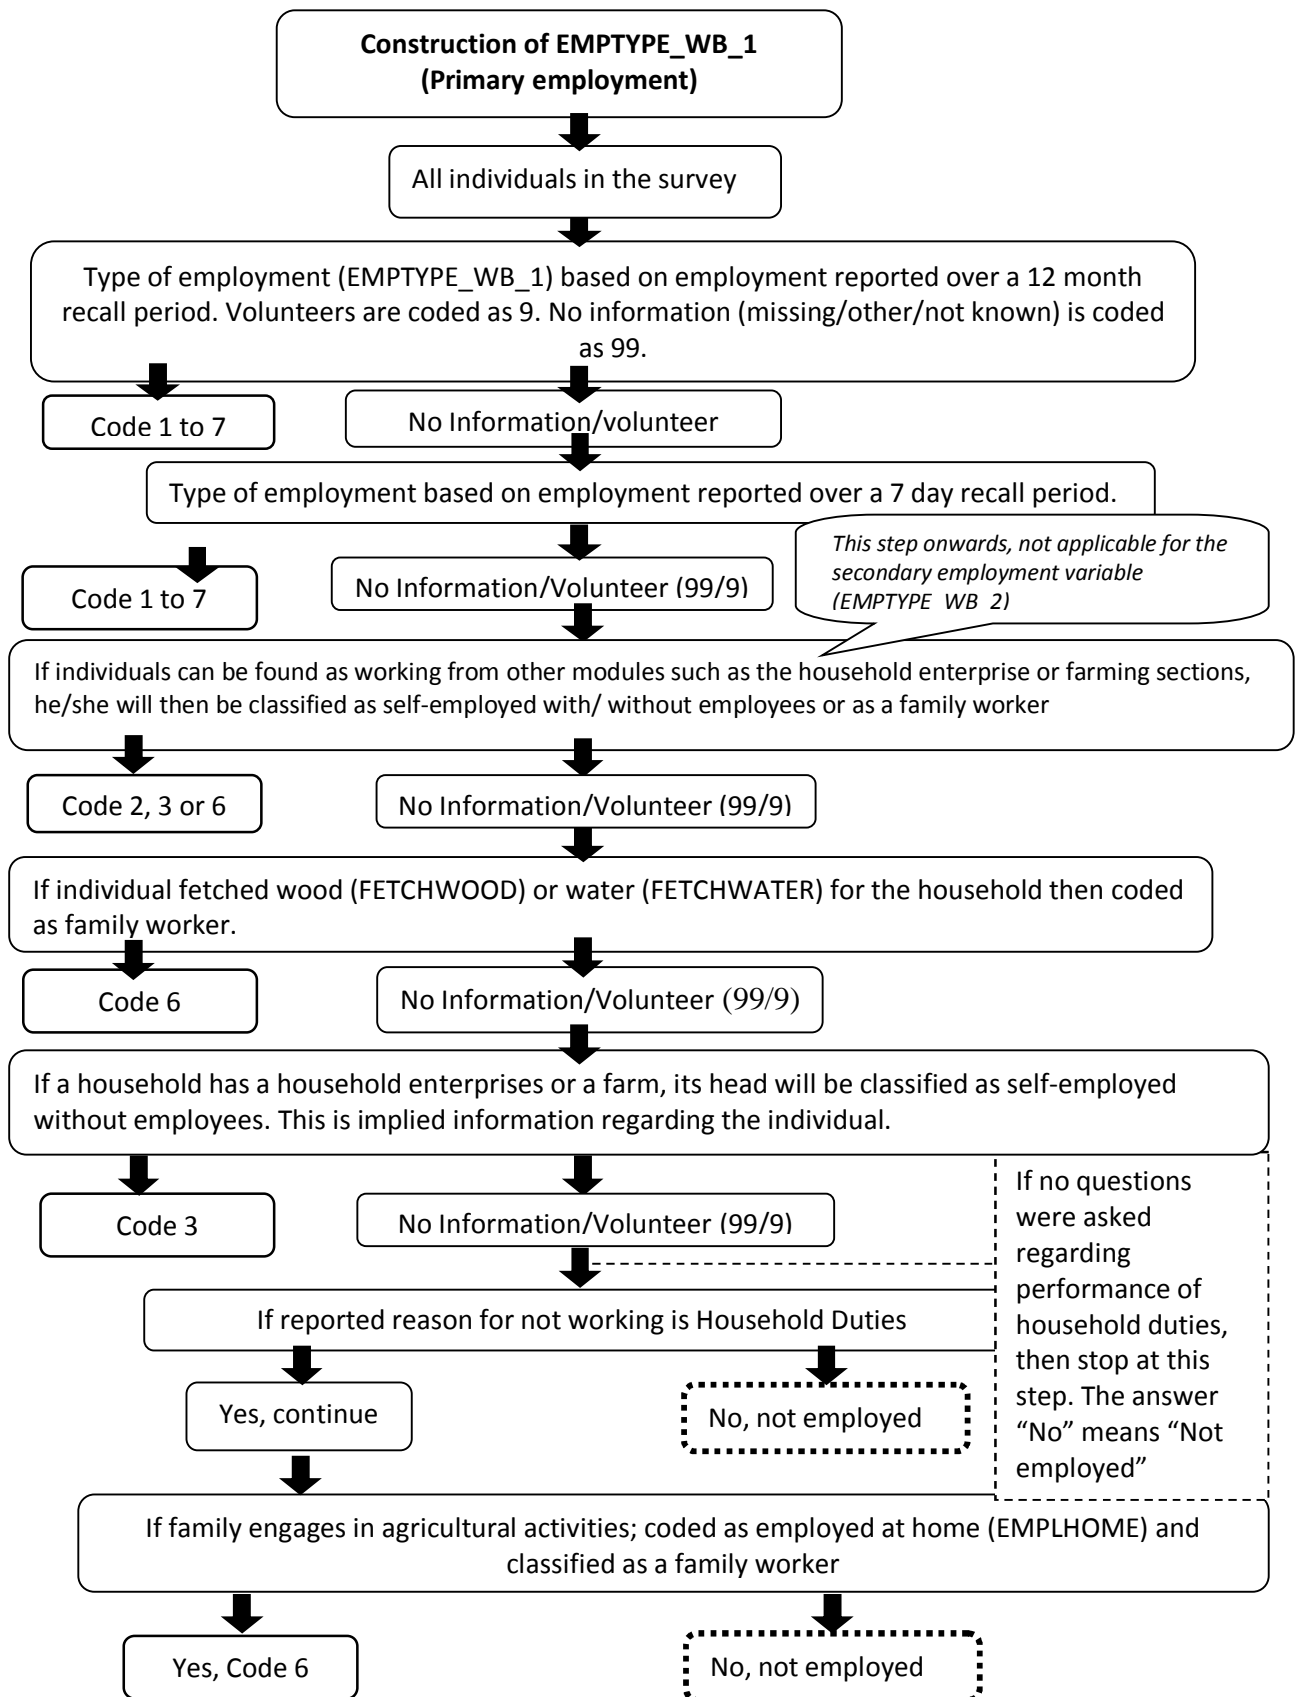

Table 4: Description of **EMPFRM** and **EMPSEC**

EMPFRM	Coded as 'yes' if the individual is employed in agricultural activities. Activities in the agriculture sector include regular farming, sharecropping, raising livestock, bee-keeping, fishing, logging and hunting. Individuals who fetch wood and/or water (FETCHWOOD/FETCHWATER) for the household or are employed at home(EMPLHOME), are classified in the agriculture sector. In addition, if the household engages in agricultural activities, then the heads of such households are classified to be in the agriculture sector.
EMPSEC	Captures the type of the employment establishment – 1) public, 2) private and 3) State-owned enterprise. It is based only on an explicit question in the survey to this effect.

EMP_CAT_1 is derived from the following underlining variables:

1. EMPTYTYPE_WB_1 (Table 3 and Flowchart 1)
2. EMPFARM_1 (Table 4)
3. EMPSEC_1 (Table 4)

Table 5: Construction of **EMP_CAT_1**

Variable Names			Description
EMP_CAT_1	EMP_CAT_1=11 Wage public	EMPTYTYPE_WB_1= 1, 4, 5, 7, 9	Type of employment is wage or employer or domestic employee or apprentice or volunteer.
		EMPSEC_1= 1, 2	Individual worked in either the public sector or in a state owned company.
	EMP_CAT_1=12 Wage private non-agriculture	EMPTYTYPE_WB_1= 1, 4, 5, 7, 9	Type of employment is wage or employer or domestic employee or apprentice or volunteer.
		EMPSEC_1= 3	Individual worked in the private sector.
		EMPFRM_1≠YES	Individual was NOT employed in agricultural activities.
	EMP_CAT_1=13 Wage private agriculture	EMPTYTYPE_WB_1= 1, 4, 5, 7, 9	Type of employment is wage or employer or domestic employee or apprentice or volunteer.
		EMPSEC_1= 3	Individual worked in the private sector.
		EMPFRM_1=YES	Individual was employed in agricultural activities.
	EMP_CAT_1=13 Family enterprise non-agriculture	EMPTYTYPE_WB_1= 2, 3, 6	Type of employment is self-employed with or without employees or family worker.
		EMPFRM_1≠YES	Individual was NOT employed in agricultural activities.
	EMP_CAT_1=13 Family farmer	EMPTYTYPE_WB_1= 2, 3, 6	Type of employment is self-employed with or without employees or family worker.
		EMPFRM_1 =YES	Individual was employed in agricultural activities.

APPENDIX II: ISSUES IN HOUSEHOLD EXPENDITURE AGGREGATION

DATA CLEANING

Eliminating duplicates: Before the aggregation, one should make sure that there is no duplicated household or individual id (This problem should have been eliminated at the data entering stage, this is just a quick check). There are two types of duplicate household id. One is that one household was entered twice, in which case all other variables should be also the same, such as physical features of the housing, rent paid, etc. In such case, one of the duplicated observations should be eliminated (STATA can perform this task easily). Second type of duplicate is two or more households have identical households ID. This type of duplicate is hard to discover because one often takes two households as one household. However, unusual large household size, such as over 30, should warrant a check of the household to make sure that they are not two households. When there are two or more same ids signed to household members, if the two or more members have exact same information, such as age, sex, status enrollment, etc., a double entry of the same member is usually the case, and one should eliminate one of the observations. However, if they are two different individuals, one should reassign a new id to one of the members.

Cleaning expenditure per capita variable: Per capital annual food and non-food consumption is first adjusted by regional food price indices. Outliers (separately for food and non-food expenditure), greater than three standard deviations will then be replaced with the median values of the corresponding per capita food and non-food consumption, by region and by rural/urban areas. Total number of observations cleaned should be less than 1 percent of total observations. If it is greater than 1 percent of total observations, aggregation procedures should be rechecked to ascertain accuracy.

Do not assign missing values: A common mistake is to assign missing values with some meaningful values when aggregating a variable. To avoid incorrectly assigning missing values, avoid open ended grouping while coding. For example, do not use “if AGE<5 then CHDUNDR5=1”, instead, use “if 0<=AGE<=5 then CHDUNDR5=1”. In addition, the number of missing values must be checked before and after the aggregation to see if the numbers of missing values are consistent.

DATA AGGREGATION

Purchased Food expenditure aggregation in general is straight forward. For purchased food, one just adds up all values of relevant items according to the sub-categories. If the recall period is 2 weeks, the annualized expenditure will be derived by multiplying the reported values by 365/14, and if the recall period is one month, then by 365/30.

Auto food expenditure aggregation is more complicated. Food auto-consumption comes in two varieties: that which is produced by the household and the gifts in kind which the household consumes. Both must be valued, although the first may be the only one to immediately spring to the reader's mind.

If the total value of auto-consumption is not asked, in general, the valuation of auto-consumption is a two-step process. First, the prices are imputed for the goods that are auto-consumed, and then the aggregation is done as for purchased expenditure. If the survey had a community price questionnaire, this is usually the source of prices for auto-consumption. If such information is missing but prices can be inferred from household survey on auto consumption, then this is the source for prices. If neither method is possible, external sources of price data are used. An example is administrative records of market prices. In all these cases, there is some degree of bias, since the market price for a good is not necessarily farm gate prices. There may be an intermediary who purchases at less than the market

price, or there are travel and time costs associated with selling the good at market. However, it is better to have the information and (potentially) over-estimate the value than to ignore it entirely.

Generally, surveys collect information on food expenditure using multiple units of measure. A common unit of measure is necessary in order to compare prices; the simplest are often metric units like kilos and liters. Note that prices will not be the same for all units of measure: buying rice by the gram is likely to be more expensive than buying it in 50-kg bags (volume discount).

Once the price data is found, the level of disaggregation at which the prices are useful must be determined. The tradeoff is one of number of observations versus the household's reality. As the number of observations increases, the confidence in the mean (or median) price increases too; hence the imputed price is better. However, all enumeration areas in a district need not have the same market and growing conditions; the less fine the geography, the greater the risk of "noise" due to dissimilarities. This is a fine line, but generally 30 observations in for each product in each region are a minimum.

Once the prices are determined, the remainder of the work is identical to that of the purchased food consumption, except that the imputed prices are used to value the consumption. For purposes of validation and analysis, it is recommended that the same categories as for purchased expenditure be used.

Education expenditure aggregation should be annualized based on the time of school year. For example, monthly transportation fee should only be multiplied by the number of the months when children go to school, normally 9, to get the annual transportation expenditure.

Health care expenditure aggregation is more difficult. Health care expenditures are often asked for the last three months or so. Although if one was sick in the last three months, it does not necessarily mean that one was sick every three months. In practice, however, the three-month expenditure is often multiplied by 4 to get the annualized expenditure. This is more or less fine with expenditures on consultation fees and medication. For hospitalization fees, however, if it is lumpy, it should be treated as a onetime annual expenditure.

Housing expenditure is often only available for households who rent. For owner occupied houses, if mortgage or the market value of the rent is not asked code it as missing.³

Durable goods and Lumpy expenditures are excluded: This rule needs to be implemented with caution: in some countries one may find that many households report weddings, baptisms, and funerals in a survey. In the case of the 1994-95 Enquête Permanente de Conjoncture Economique et Sociale in Niger, over 60 percent (weighted) of all regions' households reported expenditure related to a marriage or a baptism. In this case, it is no longer an infrequent, uncommon expenditure item. The general rule

³ The most commonly used methodology to impute rent is to use a hedonic regression to estimate the housing value for owner occupied houses. First, a regression model is fitted to households who paid rent, with dependent variable being the reported monthly rent, and independent variables being the physical features of the households, including latrines, number of rooms, materials of floor, wall and roof, the presence of a kitchen, the source of drinking water, the source of lighting power, and the cooking fuel. Other variables, known as "controls" are added to the regression to adjust for regional or rural-urban differences.

Once the model is done, a useful check of the quality is to use it to predict the rent for households that paid rent. If there is a systematic difference, something remains to be exploited. Otherwise, the desired result is small deviations between the actual and predicted rents. The parameters estimated from the hedonic regression are then used to estimate the rent for owner occupied houses. For the final rent that will be included in the total household expenditure, there are two choices. One is to use rent predicted by the regression for all the households, including those who paid rent. The reason of doing so is that regression often predicts rent somewhat lower than the actual rent paid. Using regression estimated rent for all the households puts everyone on equal footing. Another one is to use regression estimated rent for the owner occupied households only, the actual rent paid is used for renters.

is to omit lumpy expenditure, the ones that are not frequently or commonly spent, especially if they are large relative to total household expenditure, from the total household expenditure aggregate.

Adjustment of cost of living is to take into account that same money can buy different amount of goods in different regions. For example, a pound of beef would be much more expensive in a capital city than in a rural town where the cattle are raised nearby. To calculate regional price deflators, national average price and food share for the largest 20 items will be used as base price index. The regional price deflator is then calculated as P_r^k where P_r is price deflator for region r , P^k is the national share of commodity “ k ” for the national food basket, P_r^k if the regional price for commodity “ k ”, and P^k is the national average price for commodity “ k ”.

Common Sense: Expenditure aggregation is easier said than done, many judgments must be made on individual cases. The most important rule perhaps is to use on the ground knowledge/ common sense while using statistical tools. The second important rule is to document in detail the steps used for aggregation. Finally, some basic statistics should be checked against reality.

ANNEX III: ISO 3166-1 ALPHA-3 - COUNTRY CODES (SUB-SAHARAN AFRICA)

ANNEX IV: INTERNATIONAL STANDARD INDUSTRIAL CLASSIFICATION (ISIC)

The following is an extract from the International Standard Industrial Classification of Economic Activities⁴ (ISIC) Rev. 3.1. It will be used to generate variables INDUSTRY_1 and INDUSTRY_2.

The individual categories of ISIC have been aggregated into the following 17 sections:

Section	Divisions	Description
A	01, 02	Agriculture, hunting and forestry
B	05	Fishing
C	10-14	Mining and quarrying
D	15-37	Manufacturing
E	40, 41	Electricity, gas and water supply
F	45	Construction
G	50-52	Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods
H	55	Hotels and restaurants
I	60-64	Transport, storage and communications
J	65-67	Financial intermediation
K	70-74	Real estate, renting and business activities
L	75	Public administration and defense; compulsory social security
M	80	Education
N	85	Health and social work
O	90-93	Other community, social and personal service activities
P	95-97	Activities of private households as employers and undifferentiated production activities of private households
Q	99	Extraterritorial organizations and bodies

The Classifications registry keeps updated information on Statistical Classifications maintained by the United Nations Statistics Division (UNSD). For the SHIP we will use ISIC rev. 3.1. For generating EMP_IND, the classification is as following:

For standardized file, this classification is used:-		
A + B	=	Agriculture and fishing
C	=	Mining and quarrying
D	=	Manufacturing
E	=	Electricity, gas and water supply
F	=	Construction
G + H	=	Commerce
I	=	Transport, storage and communication
J + K	=	Financial, insurance and real estate
L	=	Public administration
M, N	=	Education, health and social work
O + P + Q	=	Other services

APPENDIX V: STANDARD EXCEL SPREADSHEET, *to be continued*

[illegible]

Standard Excel Spreadsheet, *continued*

Country name	Year	144. *MDG1: Eradicate extreme poverty and hunger																	
Country name	Year	145. Mean monthly per capita expenditure	PPP2005																
Country name	Year	146. Poverty headcount under \$PPP1.25/day	Percent																
Country name	Year	147. Gini coefficient, consumption	Ratio																
Country name	Year	148. *Mean share of household expenditures																	
Country name	Year	149. Food expenditure	Percent																
Country name	Year	150. Health expenditure	Percent																
Country name	Year	151. Education expenditure	Percent																
Country name	Year	152. Public transportation expenditure	Percent																
Country name	Year	153. Private transportation expenditure (excludes fuel)	Percent																
Country name	Year	154. Fuel expenditure (for transportation)	Percent																
Country name	Year	155. Electricity expenditure	Percent																
Country name	Year	156. Gas expenditure	Percent																
Country name	Year	157. Kerosene expenditure	Percent																
Country name	Year	158. Diesel expenditure (all purposes but transport)	Percent																
Country name	Year	159. *MDG2: Education and Literacy; MDG3 Promote gender equality																	
Country name	Year	160. * Gross primary enrollment rate																	
Country name	Year	161. Female	Percent																
Country name	Year	162. Male	Percent																
Country name	Year	163. *Gross lower secondary enrollment ratio																	
Country name	Year	164. Female	Percent																
Country name	Year	165. Male	Percent																
Country name	Year	166. *Gross senior secondary enrollment ratio																	
Country name	Year	167. Female	Percent																
Country name	Year	168. Male	Percent																
Country name	Year	169*. Net primary enrollment rate																	
Country name	Year	170. Female	Percent																
Country name	Year	171. Male	Percent																
Country name	Year	172. *Primary completion rate on time																	
Country name	Year	173. Female	Percent																
Country name	Year	174. Male	Percent																
Country name	Year	175. *Net lower secondary enrollment ratio																	
Country name	Year	176. Female	Percent																
Country name	Year	177. Male	Percent																
Country name	Year	178. *Net senior secondary enrollment ratio																	
Country name	Year	179. Female	Percent																
Country name	Year	180. Male	Percent																
Country name	Year	181. *Tertiary enrollment over age 18-22*	Percent																
Country name	Year	182. of which female	Percent																
Country name	Year	183. *Youth literacy rate ages 15-24																	
Country name	Year	184. Female	Percent																
Country name	Year	185. Male	Percent																
Country name	Year	186. *MDG4: Reduce child mortality; MDG5: Improve maternal health																	
Country name	Year	187. Distance to health centers < 5 km	Percent																
Country name	Year	188. Percent claiming to be sick last 2 wks	Percent																
Country name	Year	189. of which percent sought medical care	Percent																
Country name	Year	190. Birth assisted by trained staff	Percent																
Country name	Year	191. 1-year-olds total immunization	Percent																
Country name	Year	192. 1-year-olds immunization, measles	Percent																
Country name	Year	193. *MDG7: Ensure environment sustainability																	
Country name	Year	194. Owner occupancy rate	Percent																
Country name	Year	195. Access to flush/improved toilets	Percent																
Country name	Year	196. of which improved pit latrine	Percent																
Country name	Year	197. Access to garbage collection	Percent																
Country name	Year	198. Connected to electricity	Percent																
Country name	Year	199. of which solar/wind electricity	Percent																
Country name	Year	200. *Fuel use																	
Country name	Year	201. Firewood/charcoal	Percent																
Country name	Year	202. Kerosene/electricity/gas	Percent																
Country name	Year	203. Other	Percent																
Country name	Year	204. Missing	Percent																
Country name	Year	205. *Access to water																	
Country name	Year	206. Improved	Percent																
Country name	Year	207. Unimproved	Percent																
Country name	Year	208. Other	Percent																
Country name	Year	209. Missing	Percent
